PREFACE

Pakistan Social and Living Standards Measurement Survey (PSLM), 2012-13 is the eighth round of a series of surveys planned to be conducted up to 2015. The survey has been conducted with the aim to provide data for use by the government to monitor development plans at district level and rapid assessment of programmes initiated under Medium Term Development Framework (MTDF) in the overall context of MDGs.

The survey has been conducted covering 75,516 households to provide indicators in the sectors such as Education, Health, Water Supply & Sanitation and Household Economic Situation & Satisfaction by facilities and services use. The fieldwork was carried out between October 2012 and June 2013. This report provides information on the key social indicators at district level with urban/ rural breakdown.

The report contains five chapters. These are: Introduction, Education, Health, Housing, Water Supply and Sanitation, Household perception of economic situation and satisfaction by facilities and services use. I would like to congratulate Mr. Ayazuddin, Deputy Director General PBS and the whole PSLM team for the successful completion of the task. The report is also available on the website of PBS.

Comments and suggestions for improving future issues of this report will be most welcome.

ACKNOWLEDGEMENTS

Pakistan Social and Living Standards Measurement (PSLM) Survey was started in the year 2004 and planned to be conducted up to 2015. It provides Social & Economic indicators in the alternate years at Provincial and District level. The PSLM Survey is a major contribution towards construction of district level database on Education, Health, Household Assets, Water Supply & Sanitation and Household perception etc. The district level data provides valuable insights into the dynamics of districts according to different aspects and help to evaluate the impact of a changing environment as a result of implementation of the government devolution plan. The data generated through surveys is being used to assist the government in formulating developments plans at district level and rapid assessment of programs initiated in the overall context of Millennium Development Goal's (MDGs).

This is fifth report of PSLM District level survey after PSLM 2004-05, 2006-07, 2008-09 and 2010-11 and provides information at National/ Provincial and District level with urban/ rural breakdown. This report contains the data collected from 75516 household based on 5411 urban & rural Primary sampling units (PSU's). Fieldwork of PSLM 2012-13 was started in October 2012 and completed in June 2013.

The timely completion of the fifth round of the PSLM District level report has been possible because of the enormous hard work and devotion put in by the PSLM management team at headquarters, the Data Processing Centre, PSLM field teams and Sample Design Section of the Pakistan Bureau of Statistics. It is indeed a matter of great pride for the whole organization.

Considering the requirements of the policy makers, planners, researchers and other data users, efforts have been made to improve the report. It is hoped that the data users will find this report useful and any further comments and suggestions for future improvement will be welcome and highly appreciated.

(Ayazuddin)
Deputy Director General

April, 2014

EXECUTIVE SUMMARY

This report presents district along with National/provincial level findings of the eighth round of the Pakistan Social and Living Standards Measurement (PSLM) Survey 2012-13. In this survey, 75,516 households were covered in the entire country and information was collected from households on a range of social sector issues. These are primarily focussed on the main sectors i.e. Education, Health, Household Assets/ Amenities, Immunisation, Pre/Post Natal care of females and Household satisfaction by facilities & services in the overall context of Millennium Development Goals (MDGs).

Indicators between different groups are presented disaggregated by province/district, by region (urban-rural) and by gender. The indicators given in the report have been compared with the previous reports of PSLM surveys, wherever possible.

Education

The Gross Enrolment Rate (GER) for primary schools (Age 5-9) at National level has slightly decreased to 91 percent in 2012-13 from 92 percent in 2010-11. Punjab with primary level GER with 98 percent is highest and Balochistan with 73 percent is lowest among the provinces. Islamabad (Federal Capital) shows decrease with 110 percent in 2012-13 from 120 percent in 2010-11. While observing the district level position, Layyah with 120 percent is the district at the top and Dera Bugti with 23 percent is the district at the bottom. The Net Enrolment Rate (NER) for primary schools at National level has increased marginally to 57 percent in 2012-13 from 56 percent in 2010-11; however, it remained substantially lower than the GER because of the enrolment of overage children. Punjab with 62 percent has the highest NER at primary level whereas Balochistan with 45 percent has the lowest. Islamabad (Federal Capital) has the NER at 82 percent in 2012-13. Comparing primary level NERs for districts, it is observed that, Chakwal with 83 percent is at the top and Dera Bugti with 9 percent is at the bottom. The PSLM survey collects information on enrolment in all types of schools i.e. public and private. The PSLM 2012-13 shows decrease in the share of primary enrolments in government schools. The overall share has decreased to 66 percent in 2012-13 as compared to 68 percent in 2010-11.

The GER for middle level (Age 10-12) for National level has increased to 56 percent in 2012-13 from 54 percent in 2010-11 and NER has also increased to 22 percent in 2012-13 from 20 percent in 2010-11. Province wise situation also shows the increasing pattern in GER at middle level except Sindh which remained stagnant with 48 percent. Among provinces Khyber Pakhtunkhwa (KPK) with 61 percent has the highest

percentage whereas Balochistan with 39 percent lagged behind all the provinces. The middle level GER for Islamabad (Federal Capital) is 104 percent. Chakwal with 98 percent in Punjab has the highest while Dera Bugti in Balochistan has lowest position among all the districts in Pakistan. However, NER which gives more realistic picture shows increasing trend at provincial level except Sindh. Punjab with 25 percent has the highest middle level NER whereas Balochistan at 14 percent has the lowest. The NER for Islamabad (Federal Capital) is 49 percent. Chakwal with 41 percent has the highest NER at middle level whereas Gwadar with 27 percent has the lowest.

The Matric level GER (Age 13-14) for National level has increased to 59 percent in 2012-13 from 57 percent in 2010-11. Here again the provinces shows almost the same pattern; as Punjab with 62 percent and Balochistan with 37 percent are at highest and lowest respectively. The GER for Islamabad (Federal Capital) is 101 percent. Looking by the district breakdown Jehlum with 104 percent has the highest percentage and the Dera Bugti in Balochistan with 2 percent has the lowest percentage. NER at National level has slightly increased to 13 percent in 2012-13 from 12 percent in 2010-11. Looking at provinces, it is observed that Punjab with 15 percent remained at the top and Balochistan with 6 percent has the lowest percentage. NER at matric level for Islamabad (Federal Capital) is 29 percent. Lahore with 23 percent has the highest and Dera Bugti, Kohlu and Musa Khel with almost no enrolment are at the lowest. It is observed that the real impact of increase in GER and NER at matric level will be observable after four/five years when the existing primary level cohort reaches at Matric Level.

The literacy level of population (10 years & above) at National level has shown improvement. It has risen to 60 percent in 2012-13 from 58 percent in 2010-11. Literacy remains much higher in urban areas than in rural areas and much higher in men than in women. Punjab with 62 percent has the highest and Balochistan with 44 percent has the lowest percentage among all the provinces. Islamabad (Federal Capital) scored 86 percent. Rawalpindi and Karachi with 82 percent and Dera Bugti with16 percent are the districts with the highest and lowest literacy rates respectively. Adult literacy (15 years & above) at national level has also increased to 57 percent in 2012-13 from 55 percent in 2010-11. The Adult literacy rate in Islamabad (Federal Capital) is 84 percent. Among all the district of Pakistan, Karachi with 81 percent has the highest and Kohlu with 8 percent has the lowest adult literacy rate respectively.

Health

Two measures of immunization coverage are presented in PSLM, “record based” and “recall & record based” measures. Based on recall, at least one immunization to the child is 98 percent in 2012-13 as compared to 97 percent in 2010-11. The measure of fully immunized one year old children that includes recall as well as record of

immunizations given to the child shows marginal increase to 82 percent in 2012-13 from 81 percent in 2010-11. This increase has clearly been observed in Punjab with 89 percent in 2012-13 as compared to 86 percent in 2010-11. Islamabad (Federal Capital) has shown increase in this measure with 90 percent in 2012-13 from 83 percent in 2010-11. While observing the district level position, Attock with 97 percent is the highest and Tor Garh with 3 percent is the lowest district. When considering the record based immunization rates, overall measure increases to 57 percent in 2012-13 as compared to 53 percent in 2010-11. Among provinces, Punjab is at the top with 65 percent and Balochistan at the bottom with 29 percent. In Islamabad (Federal Capital), 78 percent children got record based immunization. While observing the district level position, Gujrat with 89 percent and Ghotki with 5 percent are the highest and lowest districts respectively.

The proportion of children under five year of age suffering from diarrhoea shows marginal decrease to 10 percent in 2012-13 from 11 percent in 2010-11. No significant gap has been observed among the provinces. In Islamabad (Federal Capital) percentage of cases affected by diarrhoea is 5 percent. While observing the district level position highest numbers of cases are reported in Mastung with 42 percent and lowest numbers of cases are reported in Jehlum and Nushki with 1 percent each.

Pre-natal consultation for pregnant females during their last pregnancy has increased to 69 percent in 2012-13 from 64 percent in 2010-11. Pre-natal consultations were found much more common in urban areas with 83 percent than in rural areas with 63 percent. Among provinces Punjab is at the top with 73 percent and Balochistan is at the bottom with 50 percent. In Islamabad (Federal Capital), 96 percent women went for pre-natal consultation. While observing the district level position, Karachi with 94 percent is at the top and Tor Garh with 12 percent is at the bottom.

The frequency of post-natal consultation slightly increased to 29 percent in 2012-13 from 28 percent in 2010-11. However, a big gap between pre-natal and post-natal consultations still prevails. Sindh has highest attendance rates with 35 percent and Balochistan has lowest attendance rate with 23 percent. In Islamabad (Federal Capital), 76 percent women went for post-natal consultations. While observing the district level position, Hyderabad with 68 percent is the district at the top and Narowal with 3 percent is at the bottom.

Seventy two percent of pregnant women received tetanus toxoid injection in 2012-13 as compared to 69 percent in 2010-11. Provincial comparison reveals that Punjab is at the top with 81 percent and Balochistan is at the bottom with 31 percent. In Islamabad (Federal Capital), 99 percent women received tetanus toxoid injections. The

district level position shows that Sialkot with 96 percent is at the top and Kohlu with 4 percent is at the bottom.

Housing, Water Supply & Sanitation

The housing units by tenure reveal that percentage of households who are living in their own dwelling units remain stable at 86 percent during 2012-13 and 2010-11, while the remaining 14 percent live in either rented, rent free or subsidized housing units. Islamabad (Federal Capital) with 41 percent has the highest percentage of households living in rented or subsidized rented units. The comparison of housing units by number of rooms shows that there is slight increase in housing units with one room, 26 percent in 2012-13 as compared to 25 percent in 2010-11 and there is marginal decline in housing units with 2-4 rooms, 68 percent in 2012-13 as compared to 69 percent in 2010-11. However, houses with more than five rooms remain stable at 6 percent during 2012-13 and 2010-11. The housing units using electricity as source for lighting have increased to 93 percent in 2012-13 from 91 percent in 2010-11. Punjab with 95 percent has the highest percentage of household using electricity as a main source for lighting while Balochistan with 79 percent has the lowest percentage. In Islamabad (Federal Capital), 98 percent households using electricity as source of lighting. Among Districts, Bannu with 100 percent have the highest percentage of households using electricity as source of lighting while Awaran with 29 percent has the lowest percentage. Use of gas\kerosene oil as fuel for cooking has increased to 38 percent in 2012-13 from 34 percent in 2010-11. Sindh is at the top with 53 percent and Balochistan with 23 percent is at the bottom. In Islamabad (Federal Capital), 80 percent households are using gas\kerosene oil for cooking. While observing districts, Karachi with 98 percent has the highest number of households using gas\kerosene oil for cooking, on the other hand some districts like Shangla, Awaran,Washuk, JhalMagsi are predominantly using wood/charcoal as fuel for cooking.

In Pakistan 30 percent of the households are using tap water as main source of drinking water. Among provinces regarding tap water as main source of drinking water KPK with 44 percent has the highest while Punjab with 22 percent has the lowest percentage. In Islamabad (Federal Capital) 54 percent of households are using tap water as main source of drinking water. While observing the district level position, Karachi with 86 percent is at the top, while in district Washuk of Balochistan no household is using tap water as their main source of drinking water is dug well with 49 percent followed by motorized pump with 36 percent.

Overall in Pakistan 71 percent of households use flush toilet, 15 percent households have no toilet facility while 14 percent are using non-flush. By comparing provinces Punjab with 77 percent is at the top where the highest numbers of households are using flush toilet and Balochistan with 30 percent is at the bottom. In Islamabad

(Federal Capital) 99 percent households are using flush toilet. While observing the district level pattern Lahore with 98 percent is at the top while Washuk with 1 percent is at the bottom.

Household Perception of Economic Situation and Satisfaction by Facilities and Services

Households were asked to compare their economic situation with last year. In response to this question 43 percent in 2012-13 reported no change as compared to 40 percent in 2010-11, 37 percent reported worse or much worse in 2012-13 as compared to 43 percent in 2010-11 and 20 percent reported better or much better in 2012-13 as compared to 16 percent in 2010-11. However, when asked to compare the economic situation of the community where they live, 60 percent reported no change in 2012-13 as compared to 54 percent in 2010-11, 19 percent reported worse or much worse in 2012-13 as compared to 29 percent in 2010-11 and 16 percent reported better or much better in 2012-13 as compared to 12 percent in 2010-11.

Households were also asked to give opinion about their satisfaction of the facilities/services provided by the government. Only 53 percent of the household were satisfied from Basic Health Facility in 2012-13 as compared to 54 percent in 2010-11.Seventy Six percent of the household were satisfied with the Family Planning Service in 2012-13 as compared to 71 percent in 2010-11. Ninety Three percent household were satisfied with Schools in 2012-13 as compared to 92 percent in 2010-11. Household Satisfaction with Police has slightly increased to 48 percent in 2012-13 from 47 percent in 2010-11; however, there is decline in satisfaction from Police Services in KPK and Balochistan from 64 to 55and from 56 to 50 respectively.

Proportion of under 1 year children immunized against measles	**80**	78	76	77	76	79	82	81	**83**	**>90**

Indicator	1990-91	2004-05	2005-06	2006-07	2007-08	2008-09	2010-11	2011-12	2012-13	MDG Target 2015
Proportion of children under five who suffered from diarrhoea in the last 30 days	**26**	16	12	11	10	10	11	8	**10**	**<10**
Proportion of births attended by skilled birth attendants	**18**	48	41	37	40	41	43	49	**55***	**>90**
Proportion of women 15-49 years who had given birth during last 3 years and made at least one antenatal care consultation	**15**	50	52	58	56	53	62	68	**69**	**100**
Water Supply and Sanitation										
Proportion of population (urban and rural) with sustainable access to improve water source	**53**	66	66	66	66	65	60	59	**57****	**93**
Proportion of population (urban and rural) with access to sanitation	**30**	54	60	59	66	63	66	72	**71*****	**90**

Notes:

* Skilled birth attendant includes Doctor, Nurse, Midwife and LHV.

** Improve water source include Tap water and Hand pump as per practice used in MDG report by PD & R Division.

*** This represents flush facility in the Household

1. INTRODUCTION

1.1 The PSLM

The Pakistan Social and Living Standards Measurement Survey is one of the main mechanism for monitoring the implementation of the development projects and tracking of the MDGs. It provides a set of district level representative, population-based estimates of social indicators and their progress under the MDGs. These include intermediate as well as 'output' measures, which assess what is being provided by the social sectors, e.g. enrolment rates in education. They include a range of 'outcome' measures, which assess the welfare of the population, e.g. Immunisation Rate. Policymakers need to know, for example, whether the poor have benefited from the programme or whether increased government expenditure on the social sectors has been captured by the better off.

In the remainder of this introduction, a description of the PSLM Survey 2012-13 is provided. Data relating education, health, household assets / amenities, immunisation, pre and postnatal care and satisfaction of services is given in the following chapters. -

1.2 SAMPLE DESIGN OF PSLM SURVEY 2012-13 (DISTRICT LEVEL)

Objectives:

The data generated though PSLM Survey is used by the government in formulating the poverty reduction strategy as well as development plans at district level. The indicators are developed at district level in the following sectors.

1. Education
2. Health
3. Water Supply & Sanitation.
4. Household Assets/Amenities.
5. Satisfaction to Service Delivery.

Universe: The universe of this survey consists of all urban and rural areas of the four provinces and Islamabad excluding military restricted areas.

Sampling Frame:

Urban area:

PBS has developed its own urban area frame. All urban areas comprising cities/ towns have been divided into small compact areas known as enumeration blocks (E.Bs) identifiable through map. Each enumeration block comprises about 200-250 households and categorized into low, middle and high-income group, keeping in view the socio

economic status of the majority of households. Urban area sampling frame consists of 26698 enumeration blocks has been updated in 2003.

Rural area:

With regard to the rural areas, the lists of villages/mouzas/deh according to Population Census, 1998 have been used as sampling frame. In this frame, each village/mouzas/deh is identifiable by its Name, Had Bast Number, Cadastral map etc. This frame is comprised 50588 villages/mouzas

The numbers of enumeration blocks in urban and mouzas/dehs/villages in rural areas of the country are as under:

NO. OF ENUMERATION BLOCKS AND VILLAGES AS PER SAMPLING FRAME

Province	Number of E. Blocks	Number of Villages
Punjab	14,549	25,875
Sindh	9,025	5,871
Khyber Pakhtunkhwa	1,913	7,337
Balochistan	613	6,557
A.J.K	210	1,654
Northern Area	64	566
FATA		2,596
Islamabad	324	132
Total	**26,698**	**50,588**

Stratification Plan:

A. Urban Domain: Islamabad, Lahore, Gujranwala, Faisalabad, Rawalpindi, Multan, Bahawalpur, Sargodha, Sialkot, Karachi, Hyderabad, Sukkur, Peshawar and Quetta have been considered as large sized cities. Each of these cities constitutes a separate stratum and has further been sub-stratified according to low, middle and high-income groups. After excluding population of large sized city (s), the remaining urban population in each district in all the provinces has been grouped together to form a stratum.

B. Rural Domain: Each district in the four provinces of Pakistan has been treated an independent stratum.

Sample Size and its Allocation: Keeping in view the objectives of the survey, the sample size for the four provinces has been fixed at 5438 sample villages / enumeration blocks (PSU's) comprising 77,764 households (SSU's), which is expected to produce

reliable results at the district level. However it is pertinent to mention here that 26 PSU's comprising 396 households of Panjgur district and 01 PSU consisting 16 households in Karachi were dropped from the scope of the survey due to law and order situations. The province wise sample size and its allocation is given as under;

PROFILE OF THE PSU'S AND SSU'S FOR PSLM SURVEY 2012-13

	Fixed for the survey 2012-13			Covered during the survey 2012-13		
PROVINCE	**Urban**	**Rural**	**Total**	**Urban**	**Rural**	**Total**
PSU's:						
Punjab	1133	1211	2344	1133	1211	2344
Sindh	696	712	1408	696	711	1407
KPK	272	594	866	272	594	866
Balochistan	210	610	820	205	589	794
Overall	**2311**	**3127**	**5438**	**2306**	**3105**	**5411**
SSU's/Households						
Punjab	13596	19376	32972	12937	18979	31916
Sindh	8352	11392	19744	8122	11358	19480
KPK	3264	9504	12768	3133	9340	12473
Balochistan	2520	9760	12280	2406	9241	11647
Overall	**27732**	**50032**	**77764**	**26598**	**48918**	**75516**

Sample Design: A two-stage stratified sample design has been adopted in this survey.

Selection of Primary Sampling Units (PSUs): Villages in rural areas and enumeration blocks in urban areas have been taken as Primary Sampling Units (PSUs). Sample PSUs have been selected from strata/sub-strata with PPS method of sampling technique. Village wise population of 1998 census and enumeration block wise number of households collected in 2002-03 updation of urban sampling frame have been treated as measure of size for selection of sample PSUs in rural and urban strata, respectively.

Selection of Secondary Sampling Units (SSUs): Households within sample PSUs have been taken as Secondary Sampling Units (SSUs). A specified number of households i.e. 16 and 12 from each sample PSU of rural & urban area have been selected, respectively, using systematic sampling technique with a random start.

Estimation Procedures:

Detail of estimation procedures for estimates and their variances is attached as Annexure – I

1.3 Objectives and scope of analysis

This is the eighth analytical report containing district level indicators of the PSLM Survey. It provides an overview of the findings in all sectors at district levels. Given that the PSLM is a large, complex household survey that collects information on a number of different topics, the tabulations presented here comprise the detailed tables at National/ Provincial/ District levels.

1.4 Household and Survey Questionnaire

At both individual and household level, the PSLM Survey collects information on a wide range of topics using an integrated questionnaire. The questionnaire comprises a number of different sections, each of which looks at a particular aspect of household behaviour or welfare. Data collected under Round VIII includes Education, Health, Water Supply & Sanitation and Household Economic Situation & Satisfaction by facilities and services use.

1.5 Data Quality and Reliability Measures

Data quality in PSLM Survey has been ensured through built in system of checking of fieldwork by the supervisors in the field as well as teams from the headquarters. Regional/ Field offices ensured the data quality through preliminary editing at their office level. The entire data entry was carried out at the PBS headquarter Islamabad and the data entry programme used had a number of in built consistency checks. This is the 8th round of district level survey and it has been observed that overall indicators do follow the usual pattern at national/provincial levels. However, in certain districts particularly of Balochistan province there are variations in indicators between 2004-05, 2006-07, and 2008-09 2010-11 and 2012-13 which may be due to prevailing situation in the province, which probably lead to under/over reporting of events.

EDUCATION

2.1 Introduction

Education is the key to change. It plays vital role in bringing social development, economic prosperity and to enhance the individual's potentials. Education introduces and prepares to cope with the new orders of the modern age. As per national educational policy [1]

"Our education system must provide quality education to our children and youth to enable them to realize their individual potential and contribute to development of society and nation, creating a sense of Pakistani nationhood, the concepts of tolerance, social justice, democracy, their regional & local culture and history based on the basic ideology enunciated in the Constitution of the Islamic Republic of Pakistan."

One of the main objective of the MDGs is improvement in the percentage of literate population.The primary objective of government policy in the last few years has been to improve the level and quality of education in Pakistan. The key objectives are as follows:

- To expand public provision of primary education.
- To increase enrolments faster than the growth in population.
- To provide and ensure equal educational opportunities to all the citizens of Pakistan.
- Great stress has been put on the primary level education because it forms the core of the literate population.
- To improve the functioning & utilisation of existing schools, improve the quality of education and increase enrolments.
- To improve access to education and expand the primary education system.

Being Islamic republic of Pakistan it is worth mentioning that Islam also places great emphasis on acquiring education for both men and women. Pakistan is one of those developing countries that face challenges like development of a comprehensive Human Resource Development (HRD) policy and coherence with other socio-economic policies of the government, developing an authentic and integrated data base for better assessment of education indicators for future planning and developing a comprehensive school language policy in consultation with provincial and area governments in its education sector. Government efforts are not only to make the education more accessible and affordable but also to provide better the quality of education for all children.

PSLM data on Education is one of the major source for monitoring MDG's accordingly, two indicators "Net primary enrolment" and "Literacy rate" under goal 2 "Achieve Universal Primary Education" and two indicators "Gender parity index" for primary and secondary education and "Youth literacy GPI" under goal 3 "Promote Gender Equality and Women Empowerment" are monitored through PSLM Surveys. PSLM survey is producing key indicators on education and being a good source for the federal government as well as for the provinces to overview weak areas where serious and comprehensive efforts are required.

This chapter will cover key indicators on School attendance, Enrolment rates and Literacy.

[1]National Education Policy 2009, Ministry of Education, GoP

2.2 School attendance

The population of ten years and older that have ever attended schools at National level is 61 percent in 2012-13 as compared to 60 percent in 2010-11. This proportion, in 2012-13, is much higher in urban areas than in rural areas i.e. 77 percent and 53 percent as well as in men than in women i.e. 72 percent and 50 percent respectively. Province wise comparison reveals that Punjab with 64 percent in 2012-13 has the highest proportion of population ever attended school as compared to 63 percent in 2010-11 followed by Sindh with 60 percent showing no change when compared with 2010-11, Khyber Pakhtunkhwa (KPK) with 55 percent in 2012-13 as compared to 53 percent in 2010-11 and Balochistan with 44 percent in 2012-13 as compared to 42 percent in 2010-11. The school attendance for Islamabad is reported to be 86 percent. While observing the district level position, Rawalpindi with 82 percent, Karachi with 83 percent,Abbottabad with 74 percent and Quetta with 70 percent are the top ranked districtswithin their respective provinces. On the other hand Rajanpur with 39 percent, Thatta with 37 percent, Tor Garh with 27 percent and Dera Bugti with 16 percent are the districts at the bottom within their respective provinces (Table 2.1).

At National level, population completed primary level has increased to 51 percent in 2012-13 as compared to 49 percent in 2010-11. While comparing regions, significant difference is observed i.e. 68 percent for urban and 42 percent for rural areas. Almost the same pattern is observed when compared among gender, 60 percent for males and 42 percent for females. The province wise comparison reveals that Punjab with 54 percent in 2012-13 have the highest proportion of population that have completed primary level as compared to 52 percent in 2010-11, followed by Sindh that remained stagnant at 52 percent, KPK with44 percent in 2012-13as compared to 41 percent in 2010-11 and Balochistan with34 percentin 2012-13 as compared to 32 percent in 2010-11. In Islamabad 81 percent population has reported to have completed primary level. While observing the district level position,Rawalpindi with 73 percent, Karachi with 75 percent, Abbottabad with 65 percentand Quetta with 60 percent are the best performing districtswithin their respective provinces. On the other hand Rajanpur & Thatta with 28 percent, Tor Garh with 13 percent and Dera Bugti & Kohlu with 9 percent are the lowest within their respective provinces (Table 2.2).

2.3 Primary Enrolment Rates

Gross Enrolment Rates (GER)

The GER, sometimes referred to as the participation rate, is the number of children attending primary schools divided by the number of children aged 5 to 9 years. The GERs are presented in this report in different ways: excluding and including the katchi class and for different age groups.

Table 2.3(a) shows the gross primary level enrolment rates excluding katchi class for the age group 5-9 years and similarly Table 2.3 (b) for age 6-10 years. The GER for the age group 5-9 years at National level has slightly decreased to 91 percentin 2012-13 as compared to 92 percent in 2010-11. The GER at primary level as evident from table 2.3a is much higher in urban areas with 105 percent than in rural areas with 86 percent. Regarding Gender gap in GER at primary level; 98 percent males are enrolled as compared to 83 percent females. Province wise

comparison shows that Punjab remains stable withprimary level GER at 98 percent, Sindh shows decline to 81 percent in 2012-13 from 84 percent in 2010-11, KPK improved to 91 percent in 2012-13 from 89 percent in 2010-11 and Balochistanslightly decreased to 73 percent in 2012-13 from 74 percent in 2010-11. The GER for Islamabad is 110 percent. While observing the district level position,Layyah with 120 percent& Chakwal with 119 percent, Karachi with 109 percent, Haripur with 121 percent, Mastung with 104 percent& Quetta with 100 percent are the top ranked districtswithin their respective provinces. Whereas Rahim Yar Khanwith 65 percent, Kashmorewith 54 percent, Kohistan with 58 percent and Dera Bugti with 23 percent are the bottom ranked districtswithin their respective provinces(Table 2.3a).

The GER at National Level is 92 percent when katchi class is included and the age group is expanded to Children 4-9 years old.The pattern within districts in the provinces is more or less similar to GERs without including katchi class (Table 2.4).

The PSLM 2012-13 collected information on enrolment in all types of schools including the private and government sectors. Table 2.5 shows the GER in government primary schools. It is calculated as the number of children enrolled in government primary schools divided by the number of children of primary school age. At National level GER in government primary schools has decreased to 60 percent in 2012-13 as compared to 63 percent in 2010-11. The government school attendance is much higher in rural areas with 65 percent than in urban areas with 46 percent. Province wise comparison reveals that there is overall trend of decline in GER in government primary schools: the pattern is as follows, Punjab with 60 percent as compared to 62 percent in 2010-11, Sindh with 54 percent as compared to 59 percent in 2010-11, KPK with 66 percent as compared to 68 percent in 2010-11 and Balochistan with 67 percent as compared to 70 percent in 2010-11. The GER in government schools for Islamabad is 51 percent.While observing district level position, Layyah with 94 percent, Tharparker with 79 percent, Lower Dir with 83 percent & Upper Dir with 81 percent and Mastung with 104 percent have the highest GER in government schools within their respective provinces. Results reveals that the absence of private schools leaves no alternatives and makes government schools a priority in small cities. (Table 2.5)

Net Enrolment Rates (NER)

The NER at primary level refers to the number of students enrolled in primary schools of age 5 to 9 years divided by the number of children in the same age group for that level of education. Simply primary NER is the number of children aged 5 to 9 years attending primary level class (1-5) divided by the number of children aged 5 to 9 years.

The NER at the primary level excluding katchi class for Pakistan as a whole is 57 percent in 2012-13 as compared to 56 percent in 2010-11.It is observed that girls have lower enrolment rate with 54 percent than boys with 61 percentas evident from (Table 2.6a) and this difference is markedly larger in rural areas with 54 percent than in urban areas with 67 percent.Province wise comparison reveals that Punjab slightly increased to 62 percent in 2012-13 from 61 percent in 2010-11; Sindh shows slight decrease of 52 percent in 2012-13 from 53 percent in 2010-11, KPK increased to 54 percent in 2012-13 from 51 percent in 2010-11 and Balochistan decreased to 45 percent in 2012-13 from 47 percent in 2010-11. The primary level NERobservedforIslamabad is 82 percent. Comparing primary level NER for districts;Chakwal with 83 percent&Jehlum with 80 percent,Hyderabad with 66 percent, Haripur with 74 percent and Mastung with 73percentare

top ranked districts within their respective provinces. Whereas Bahawalpur with 41 percent, Thatta with 32 percent, Tor Garh with 34percent and Dera Bugti with 9 percentare the lowest ranked districts within their respectiveprovinces.

Table 2.8 shows the NER for government primary schools excluding katchi class. This is the number of children aged 5-9 years enrolled in government primary schools divided by the total number of children of the same age group. Like the GER for government schools, it measures the extent to which publicly provided education is reaching its target group. However, this measure excludes overage children who are enrolled in primary schools. The overall NER for Government primary schools remain stagnant at 37 percent between 2010-11 and 2012-13. The NER for government primary schools is higher in rural areas with 40 percent as compared to urban areas with 28 percent.

The primary levelenrolment in government schools as a percentage of total enrolment is shown in Table 2.9 (a). The government share of primary enrolment at national level is 66 percent in 2012-13 as compared to 68 percent in 2010-11. Province wise comparison reveals that there is overall trend of decline in enrolment in government primary schools: the pattern is as follows, Punjab with 61 percent as compared to 63 percent in 2010-11, Sindh with67 percent as compared to 71 percent in 2010-11,KPKat72 percent as compared to 76 percent in 2010-11 and Balochistan with91 percent as compared to95 percent in 2010-11. The primary level enrolment for Islamabadis 47 percent.While observing district level position, D. G. Khan with 86 percent& Rajanpur with 84 percent, Tharparker with 98 percent, Tor Garh with 100 percentand Mastung with 100 percent, Awaran and Kharan with 99 percent are the top ranked districts within their respective provinces. Whereas Gujranwala with 37 percent, Karachi with 23 percent, Peshawar with 53percentand Quettawith 72 percenthave the lowest primary enrolment in government schools within their respective provinces. The above analysis reflects that developed districts have larger share of private education whereas less developed districts mainly depend on government educational facilities (Table 2.9a)

2.4 Middle Enrolment Rates

Gross Enrolment Rates (GER)

Gross and net enrolment rates for the middle level with age group 10-12 years old are presented in Tables 2.10(a) and 2.11(a). The GER for the middle level, for Pakistan as a wholehas increased to 56 percent in 2012-13 as compared to 54 percent in 2010-11.The middle level enrolment in urban areas has increased to 72 percent in 2012-13 as compared to 71 percent in 2010-11 and similar pattern is observedin rural areas i.e. 49 percent in 2012-13 as compared to a 47 percent in 2010-11.Comparison by gender shows that GER for male has increased from 59 percent in 2010-11 to 61 percent in 2012-13 and female enrolment 48 percent in 2010-11 to 50 percent in 2012-13. Province wise situation also shows the increasing pattern in GER at middle level, Punjab at60 percent as compared to58 percent in 2010-11, Sindh remained stable at48 percent, KPKat61 percent as compared to57 percent in 2010-11 and Balochistan at39 percent as compared to35 percent in 2010-11.The GER at middle level for Islamabad is 104 percent. Comparing middle level GERs for districts; it is revealed that Chakwal with 98 percent, Karachi with 70 percent, Abbottabad with 91 percent and Quetta with 79 percent are the best performing districts within their respective provinces. WhileRajanpur with 28 percent,Thatta with 21

percent, Kohistan with 16 percentand Dera Bugti with 7 percent have lowest GERswithin their respective provinces.

Net Enrolment Rates (NER)

Net enrolment rate at the middle level (Age 10-12) is 22 percent in 2012-13 as compared to 20 percent in 2010-11.The NER at middle level is much lower than GER with 56 percent for the same age group. This is due to the large number of overage childrenenrolled in middle class which are filtered out during the calculation of NER.The provincial comparison shows increasing trend except in Sindh province which remains stable at 19 percent. The NER in Punjab, KPK and Balochistan has increased to 25 percentin 2012-13 as compared to 23 percent in 2010-11, 21 percentin 2012-13 as compared to 17 percentin 2010-11 and 14 percentin 2012-13 as compared to 13 percent in 2010-11 respectively. The NER at middle level for Islamabad has increased to 49 percentin 2012-13 from 47 percent in 2010-11. Comparison at district level, it is revealed thatChakwal with 41 percent,Hyderabad with 31 percent, Abbottabad with 34 percent and Gwadar with 27 percent are the top ranked whereas Bahawalpur with 13 percent, Thatta with 6 percent, Kohistan with 5 percent and Dera Bugti with 1 percent are the bottom ranked districts in their respective provinces (Table 2.11a).

2.5 Matric Enrolment Rates

Gross Enrolment Rates (GER)

Overall GER at matric levelincreased to 59 percent in 2012-13 as compared to 57 percent in 2010-11 and NERhas slightly increasedto 13 percent in 2012-13 as compared to 12 percent in 2010-11(Tables 2.12a and 2.13a). A considerable gender disparity is observed in with respect to GER at matric level i.e. 67 percent for males and 49 percent for females. Similar pattern is observed in urban and rural GER.Province wise comparison reveals that Punjab slightly increased to 62 percent in 2012-13 from 61 percent in 2010-11, Sindh shows marginal decrease at 54 percent in 2012-13 from 55 percent in 2010-11,KPKincreased to 58 percent in 2012-13 from 54 percent in 2010-11 and Balochistan slightlydecreased to 37 percent in 2012-13 from 38 percent in 2010-11. The GER inIslamabad is observed as101 percent. While observing district level position, Rawalpindi with 96 percent, Karachi with 85 percent, Chitral with 96 percent andQuetta with 78 percent are at the peak among their respective provinces. However, Rajanpur with 29 percent, Thatta with 25 percent, Kohistan with 15 percentand Dera Bugtiwith 3 percent are at the lowest level within their respective provinces. (Table 2.12a).

Net Enrolment Rates (NER)

The NER at matric level forage 13-14 years has increased to 13 percent as compared to 12 percent in 2010-11. The provincial breakdown shows upward trend except Balochistan that remained stagnant at 6 percent. The upward trend is as follows; Punjab with 15 percentin 2012-13 as compared to 14 percent in 2010-11, Sindh with 12 percentin 2012-13 as compared to 11 percent in 2010-11 and KPK with 10 percentin 2012-13 as compared to 7 percent in 2010-11. The NER for Islamabad is reported as 29 percent. District wise comparison shows that Lahore with 23 percent, Dadu with 17 percent, Haripur with 20 percent and Gwadar with 13 percent are

the top ranked districts within their respective provinces. On other hand no enrolment at matric level is reported in Dera Bugti while Bahawalpur with 9 percent, Thatta with 3 percentand Tor Garh with 3 percent are the districts with lowest NER in their respective provinces (Table 2.13a).

By changing the age group to 14-15 years the NER at matric level behaves almost the same with slight differences which is evident from Table 2.13b.

2.6 Literacy

Literacy is an important indicator of education because its improvement is likely to have an impact, in the longer run, on other important indicators of welfare. The literacy rate for population 10 years and above at National level is 60 percent during 2012-13 as compared to 58percent in 2010-11. Literacy remains much higher in urban areas than in rural areas and much higher in men than in women. Province wise comparison reveals that Punjab leads with 62percent followed by Sindh with 60 percent, KPK with 52 percent and Balochistan with 44 percent. Literacy rate for Islamabad is 86 percent.Comparing Literacy (10 years and above) for districts, it is observed thatRawalpindi with 82 percent, Karachi with 82 percent, Abbottabad with 73 percent & Haripur with 70 percent and Quetta with 70 percent are the top ranked districts within their respective provinces. On the other hand Rajanpur with 39 percent, Badinwith 36 percent, Tor Garhwith 21 percent and Dera Bugti with 16 percent are the lowest ranked districts within their respective provinces regarding literacy rates(Table 2.14 a).

Adult literacy rate for the population (aged 15 and above)is 57 percent in 2012-13 as compared to 55 percent in 2010-11. The pattern among districts within the provinces is similar to the Literacy rate of population 10 years and above (Table 2.14 b).

3. HEALTH

3.1 Introduction

The Government health strategy gives great importance to young, children and their mothers, particularly in rural areas. Government is committed to improve the health needs of the country by delivering a set of basic health services to all. Government is keen to improve women's access to government health care. As per Government Health Policy[1], its strategy also includes:

- Provide and Deliver a basic package of quality Essential Health Care Services
- Develop and Manage competent and committed health care providers
- Generate reliable health information to manage and evaluate health services
- Adopt appropriate health technology to deliver quality services
- Reform the Health Administration to make it accountable to the public

The Federal Ministry for Health has been devolved under 18th amendment as of June 2011. Since then health is a provincial subject and the funds along with other resources are being transferred to the provinces as per the constitutional requirements. It is likely to improve the prevailing health care system and effectively increase its outreach of service delivery to the masses at the grass root level. The present setup at the provincial level will be further strengthened and linked up from province to districts, from district to tehsil level and from there to urban and rural localities[2].

PSLM survey data on Health is a good source to monitor the progress in Health sector with detailed comparison between the data results before and after the implementation of devolution. Pakistan Bureau of Statistics through PSLM survey will continue to produce key indicators on Health both at National/Provincial and District level. PSLM indicators on Health are a good source for the Federal Government & for provinces to overview the progress and to assess the areas where serious and comprehensive efforts are required.

In this chapter, information is presented on a number of key indicators that include percentage of population who got Sick or Injured, Type of health consultation, Immunization, Diarrhoea and Pre and Post-natal care.

3.2 Sick or Injured

During the reference period of two weeks prior to the date of interview 7 percent of the population in 2012-13 reported sick or injured. There is no significance difference between provinces, however, Khyber Paktunkhwa (KPK) with 8 percent has comparatively higher prevalence of sick or injured population as compared to Punjab

[1] National Health Policy 2009, Ministry of Health ,GOP
[2] Ministry of Health (Pakistan) /WHO apprehensive about Health Ministry's devolution.

with 7 percent, Sindh with 7 percent and Balochistan with 6 percent. In Islamabad (Federal Capital), reported number of cases fallen sick or injured is 5 percent. While observing the district level position, Layyah & Rajanpur with 12 percent, Matiari & Jamshoro with 12 percent, Haripur with 13 percent and Khuzdar with 14 percent have the highest prevalence of sick and injured population among their respective provinces. In such cases, about 96 percent of population had some type of health consultation (Table 3.1). Over 71 percent of sick or injured persons consulted private dispensary/hospitals and 22 percent visited public dispensary/hospitals and RHC/BHU for their treatment (Table 3.3).

3.3 Immunization

One of the primary objectives of the government in health sector is to expand the coverage of immunization. Measuring immunization coverage is not an easy task. Parents often do not have the children's immunization / health cards with full information on vaccinations received. Immunization rates based only on the information given on immunization cards ('record') may therefore, underestimate coverage, however, it has the benefit of using written information recorded by health workers.[3] The alternative is to ask parents about their child's vaccination history, and calculate coverage rates using this information termed as ('recall'). This runs the risk that parents will not remember vaccinations and will confuse different types of vaccines or other injections with vaccinations. However questions are asked in questionnaire in a way to filter out such cases and during training the enumerators are also briefed about probing techniques to get better and reliable information.

According to the WHO guidelines, a child should receive a BCG (anti-TB); DPT (anti-diphtheria/whooping cough/tetanus), Measles, anti-polio (drops), given by mouth not by injection. Few years back, government has also introduced COMBO (1, 2, and 3), combination of DPT and Hepatitus. Government through "Expanded Program on Immunization" (EPI) focused on strengthening maternal and child health services within the existing health system[4]. The immunization schedule since 2010 is as follows; BCG (anti-TB); PENTA (Diphtheria, Pertussis, Tetanus, Hemophilus Influenza B and Hepatitus B); anti-polio (drops); Measles and Measles 2[5]. Measles 2 is added vaccination given at the age of 15 months. The coverage of COMBO and PENTA has been included in PSLM Round 9 in 2013-14 and results will be provided in report. Table 3.4 presents immunization rates for children aged 12-23 months, who have been immunized during the period 12 to 24 months prior to the survey. When considering the record based immunization rates, it increases to 57 percent in 2012-13 as compared to 53 percent in 2010-11, there is an increase in urban areas 66 percent in 2012-13 from 62 percent in 2010-11, similarly increase is also shown in rural areas, 54 percent in 2012-13 from 49 percent in 2010-11.

---

[3] Note that even the record-based measure cannot be based exclusively on vaccinations recorded on the health card, since it is not possible to identify the source of the information on each antigen. Instead, it is calculated for all children who had a health card, using all immunizations reported, whether or not these were recorded on the card. It is likely that most will have been recorded on the card.

[4] Ministry of Planning Development and Reform,GOP

[5] Research and Development Solutions, Policy Briefs Series No.3,USAID

Full immunization rates (all the 8 recommended vaccines) based on recall and record showed a marginal increase to 82 percent in 2012-13 from 81 percent in 2010-11. There is increase in full immunization rates for urban areas: 87 percent in 2012-13 as compared to 85 percent in 2010-11, similar pattern is observed in rural areas 80 percent in 2012-13 as compared to 79 percent in 2010-11. Islamabad (Federal Capital) has increased to 90 percent in 2012-13 from 83 percent in 2010-11.While observing the district level pattern, Attock with 97 percent, Karachi & Dadu with 89 percent, Malakand with 96 percent and Barkhan & Awaran with 91 percent are top ranked districts within their respective provinces. While Rahim Yar Khan with 77 percent, Tharparkar with 43 percent, Tor Garh with 3 percent and Dera Bugti with 6 percent are the bottom ranked districts within their respective provinces (Table 3.4 c).

Table 3.5 (record Based) and Table 3.6 (based on record and recall) provides coverage by Antigen. Having a look at record based measure, the visible increase is seen at provincial level as compared to 2010-11, however coverage of measles vaccination is 57 percent in 2012-13 as compared to 53 percent in 2010-11 that is still very low as compared to other vaccinations. Punjab with 65 percent, Sindh with 43 percent, KPK with 53 percent and Balochistan with 29 percent have the lowest coverage of measles as compared to other vaccinations.

3.4 Diarrhoea

Diarrhoeal disease is the second leading cause of death in children under five years old, and is responsible for killing around 760000 children every year in the world. Diarrhoea can last several days, and can leave the body without the water and salts that are necessary for survival. Most people who die from diarrhoea actually die from severe dehydration and fluid loss[6]. Childhood diarrhoea has been a serious health problem in Pakistan. Both its prevention, through improved water and sanitation, and the treatment of dehydration through oral re-hydration salts (ORS) are goals of government. Home management of diarrhoea through oral rehydration salts (ORS) or a recommended home fluid (RHF) - can prevent many of these deaths.

The households were asked to report whether a child had diarrhoea in the 30 days prior to the survey. If child suffered from diarrhoea in last 30 days, series of questions were asked whether they have consulted someone for it or not and whether ORS has been given to child or not.

Overall percentage of children who have suffered from diarrhoea in the 30 days prior to survey is 10 percent in 2012-13 as compared to 11 percent in 2010-11. All Provinces, Punjab, Sindh, KPK and Balochistan have shown more or less same trends. In Islamabad (Federal Capital) percentage of cases affected by diarrhoea is 5 percent. While observing the district level position, Layyah with 30 percent, Jaccobabad with 23 percent & Larkana with 21 percent, Nowshera & Mardan with 17 percent, Mastung with 42

[6] WHO Media center, Diarrhoeal disease, Fact sheet No. 330

percent are the districts reported the highest number of cases within their respective provinces (Table 3.7).

Among 94 percent of diarrhoea cases a practitioner of some kind was consulted. The use of ORS in diarrhoea cases has slightly increased to 75 percent in 2012-13 from 74 percent in 2010-11. Use of ORS in case of diarrhoea is more prevalent in urban areas with 78 percent than in rural areas with 74 percent. ORS is mostly used in Balochistan with 94 percent followed by Sindh with 91 percent and KPK with 84 percent, whereas in Punjab its only 64 percent, this pattern within the districts is more or less the same, which has been observed at provincial levels (Table 3.8).

In cases of diarrhoea, the most consulted practitioner constitutes to be a private practitioner and it has increased to 70 percent in 2012-13 as compared to 66 percent in 2010-11. Basic health units (BHU) and rural health centers (RHC) were consulted by only 6 percent of cases in Pakistan, which gives some indication of the very limited use of the government primary health network for these kinds of curative services. However, in Balochistan 25 percent diarrhoea cases received consultation from government facilities such as hospitals, dispensaries and this trend is prevalent in many districts (Table 3.9).

3.5 Pre and post-natal care

Maternal health is the serious issue in developing countries including Pakistan. Government of Pakistan is fully committed to cope with this issue. In addition to reduce the maternal mortality, the provision of quality pre-natal care can also reduce the risk factors including pre-eclampsia, anemia, and sexually transmitted diseases. Pre-natal care also encourages women to learn the symptoms of pregnancy and delivery, to be immunized against tetanus, to know about infant care.

A large number of Lady Health Workers are also employed in this regard. These workers visit from home to home in order to create awareness about Pre and Post-Natal Care. Further a large network of Health Houses is established both in urban and rural areas where a well-trained lady health workers is available to facilitate the women about the mother and child health care both before and after delivery of child[7].

Some 69 percent of mothers who had given birth in the last three years went for pre-natal consultations during their last pregnancy in 2012-13 as compared to 64 percent in 2010-11. Attendance rates have increased in urban as well as in rural areas. It was much higher in urban areas, 83 percent as compared to 63 percent in rural areas. Punjab has the highest attendance with 73 percent and Balochistan has the lowest attendance with 50 percent. In Islamabad (Federal Capital), 96 percent women went for pre-natal consultation. While observing the district level position, Lahore with 91 percent, Karachi with 94 percent, Haripur with 82 percent, Harnai with 80 percent are the top ranked

[7] Journal of Pakistan Medical Association, Lady Health Worker Program in Pakistan: challenges, achievements and way forward.

districts within their respective provinces. While Jhang with 58 percent, Mir Pur Khas with 45 percent, Tor Garh with 12 percent and Kohlu with 23 percent are the lowest within their respective provinces. With reference to pre-natal consultations it appears that in many districts of Punjab and Sindh consultation is taken from private hospital while the trend is reverse in KPK and Balochistan where women in majority of districts went to public hospitals for consultation. In Overall Pakistan, the three most commonly consulted sources were private hospital/clinic with 50 percent, government hospital/clinic with 29 percent followed by home TBA with 7 percent (Table 3.10).

Tetanus Toxoid injections are given to women during pregnancy to protect infants from neonatal tetanus, a major cause of infant death that is due to primarily unsanitary conditions during childbirth. In addition these injections protect women from developing tetanus themselves or suffering from sepsis. Two doses of tetanus Toxoid during pregnancy offer full protection. However, if a woman was vaccinated during a previous pregnancy, she may only need a booster to give full protection. Five doses are thought to provide lifetime protection. Some 72 percent of mothers in 2012-13 as compared to 69 percent in 2010-11 had received a tetanus toxoid injection during their last pregnancy. In Islamabad (Federal Capital), 99 percent women received tetanus toxoid injections. While observing the district level position, Gujrat & Sialkot with 96 percent, Karachi with 91 percent, Malakand with 86 percent followed by Chitral & Charsada with 84 percent and Kalat with 77 percent are the top ranked districts within their respective provinces (Table 3.11).

As far as the place of delivery is concerned it is observed that there is decline in number of deliveries that took place at home i.e. 50 percent as compared to 58 percent in 2010-11. In rural areas, some 59 percent deliveries took place at home as compared to 29 percent in urban areas. While observing the district level pattern for delivery location it is revealed that, Rajanpur with 83 percent, Kashmore with 84 percent, Kohistan with 91 percent and Kohlu with 95 percent are the districts within their respective provinces, where most of deliveries took place at home. In Islamabad (Federal Capital) mostly deliveries took place at government hospitals/RHC/BHU. In urban areas most deliveries 62 percent are assisted by doctors followed by trained dai with 16 percent and the most commonly cited source of assistance in rural areas is doctor with 31 percent followed by trained dai with 30 percent (Table 3.12).

Post-natal consultation rates even though improved in 2012-13, are still much lower than the pre-natal rates as cited above. Some 29 percent of mothers received post-natal check-up within six weeks of delivery during their last pregnancy as compared to 28 percent in 2010-11. Post-natal consultation is higher in urban areas with 37 percent as compared to rural areas with 25 percent. In Islamabad (Federal Capital), 76 percent women went for post-natal consultations. While observing the district level position, Rahim Yar Khan with 46 percent, Hyderabad with 68 percent, Lower Dir with 42 percent and Sibbi with 41 percent are the top ranked districts for post-natal consultations within their respective provinces.

The most commonly cited sources of post-natal care in urban areas as well as rural areas were private hospital/clinic with 58 percent and 49 percent respectively followed by government hospital/clinic with 25 percent in both urban areas and rural areas (Table 3.13).

4. Housing, Water supply & Sanitation

4.1 Introduction

In Pakistan most of the households do not have access to adequate potable or shallow water. Similarly many households also lack toilets and adequate sanitation facilities. Sanitation is one of the basic necessities, which contributes to human dignity and quality of life and is an essential pre-requisite for success. The Government of Pakistan, while recognizing that access to safe drinking water is the basic human right of every citizen and that it is the responsibility of the state to ensure its provision to all citizens, Government is committed to provide adequate quantity of safe drinking water to the entire population at an affordable cost and in an equitable, efficient and sustainable manner.

In order to fulfill this commitment of the Government, the Ministry of Environment, in line with provisions of the National Environment Policy has formulated the National Drinking Water Policy 2009 through a countrywide consultation process with the aim to increase public awareness about water safety, safe hygiene practices and water conservation.[1] In this chapter, information is presented on Housing, Fuel used for Lighting and cooking, & Main Source of drinking Water and Sanitation.

4.1.1 Sanitation

The term sanitation, however, extends to cover cleanliness, hygiene, proper collection of liquid and solid wastes and their environmentally sound disposal. In this endeavour, the needs for waste reduction, reuse, recycle and change in the attitude towards consumption and production patterns are other imperatives for achieving goals of sustainable environment**.** The main goal of National Sanitation Policy is to provide adequate coverage for improving the quality of life of the people of Pakistan and to provide physical environment necessary for healthy life[2].

4.2 Housing

A house is a building that functions as a home for humans, including simple dwellings ranging from rudimentary huts of nomadic tribes and complex structures composed of many systems. Occupancy status wise houses are of different types like own, rent, free and subsidized rent.

Overall in Pakistan the number of household that own dwelling units remains stable at 86 percent during the period 2010-11 to 2012-13. The percentage is higher in rural areas, 91 percent as compared to 75 percent in urban areas. Provincial comparison shows that percentage of household that own their dwelling units is highest in

[1] National Drinking Water Policy 2009, Ministry of Environment, Government of Pakistan
[2] National Sanitation Policy, Government of the Islamic Republic of Pakistan , Ministry of Environment

Balochistan with 91 percent in 2012-13 as compared to 89 percent in 2010-11 followed by Punjab & KPK with 87 percent as compared to 86 percent & 87 percent respectively in 2010-1, whereas Sindh with 82 percent in 2012-13 as compared to 84 percent in 2010-11 have the lowest percentage of household who live in own dwelling units (Table 4.1). In Islamabad (Federal Capital) 41 percent households live in rented or subsidized rented units in 2012-13 as compared to 36 percent in 2010-11 and 51 percent of households have their own housing units in 2012-13 as compared to 55 percent in 2010-11.While comparing districts; D.G khan with 96 percent, Tharparkar with 100 percent, Chitral with 99 percent and Awaran & Washuk with 100 percent are the districts where people predominantly live in their own housing units within their respective provinces. On the other hand, Rawalpindi with 70 percent, Mir Pur Khas with 64 percent, Peshawar with 74 percent, and Quetta with 70 percent are the bottom ranked districts within their respective provinces.

Table 4.2 shows percentage distribution of households for material used for roof. In overall Pakistan garder\t-iron with 37 percent is predominantly used as material for roof construction. This percentage is higher in rural areas, 43 percent as compared to 26 percent in urban areas. It is worth mentioning here that the category garder\t-iron & garder-bala in 2010-11 was included in the category “others”, but for the year 2012-13, keeping in view the importance of garder\t-iron it was covered under separate category. Therefore, a marked decrease is observed in the category “others”, which was mainly because of exclusion of garder\t-iron. Among districts Bahawalpur with 82 percent, Nowshero Feroze with 61 percent, Karak with 47 Percent and Sibbi with 48 percent are top ranked districts using garder\t-iron as material for roof construction within their respective provinces

In overall Pakistan 28 percent households used rcc\rbc as main material for roof construction. This percentage is higher in urban areas, 59 percent as compared to 12 percent in rural areas. In Islamabad (Federal Capital), 92 percent households used rcc\rbc for construction of roof. District wise comparison shows that Lahore and Karachi with 79 percent, Haripur and Swabi with 63 percent and Quetta with 34 percent are top ranked districts using rcc\rbc within their respective provinces.

The second most used material in construction of roof is wood\bamboo. Provincial comparison shows that there is a decline in the use of wood\bamboo as material used for construction of roof; Balochistan with 72 percent in 2012-13 as compared to 73 percent in 2010-11 followed by KPK with 42 percent as compared to 51 percent in 2010-11 and Punjab with 23 percent as compared to 31 percent in 2010-11 except Sindh which shows slight increase with 33 percent in 2012-13 as compared to 32 percent in 2010-11 (Table 4.2). While comparing districts; Rajanpur with 63 percent, Tharparkar with 80 percent, Tor Garh with 97 percent and Awaran, Kohlu & Barkhan with 99 percent are the top ranked districts within their respective provinces. Whereas Islamabad (Federal Capital) with 1 percent, Bahawalnagar with 2 percent Karachi with 0.61 percent, Abbottabad with 14 percent and Quetta with 26 percent are the bottom ranked districts within their respective provinces.

Table 4.3 shows percentage distribution of households for material used for the construction of walls. In overall Pakistan, burnt bricks\blocks have been used in 76 percent housing unit in 2012-13 as compared to 72 percent in 2010-11. This percentage is higher in urban areas, 96 percent as compared to 66 percent in rural areas. Provincial comparison shows that the use of burnt bricks\blocks is highest in Punjab with 87 percent in 2012-13 as compared to 83 Percent in 2010-11 followed by Sindh with 69 percent in 2012-13 as compared to 66 Percent in 2010-11, KPK with 57 percent in 2012-13 as compared to 54 Percent in 2010-11 and Balochistan at 28 percent in 2012-13 as compared to 23 percent in 2010-11. In Islamabad (Federal Capital) 99 percent households use burnt bricks\blocks as material for construction of walls. While comparing districts, Mandi Bahuddin and Lahore with 100 percent, Karachi with 99 percent, Swabi with 84 percent and Quetta with 77 percent are the top ranked districts using burnt bricks\blocks as material used for construction of walls in their respective provinces.

Housing units by number of rooms (Table 4.4) shows that majority of the households in Pakistan live in housing units with 2-4 rooms, however there is a marginal decline in housing units with 2-4 rooms ,68 percent in 2012-13 as compared to 69 percent in 2010-11 there is a slight increase in housing units with one room,26 percent in 2012-13 as compared to 25 percent in 2010-11 and houses with more than five rooms remain stable at 6 percent during the period 2010-11 and 2012-13.Similar pattern is prevalent while observing the provinces, Balochistan have the highest percentage of housing units with 2-4 rooms, 77 percent in 2012-13 as compared to 75 percent in 2010-11 followed by KPK with 73 percent which remained stable during the period 2012-13 and 2010-11 & Sindh with 67 percent in 2012-13 as compared to 71 percent in 2010-11 while Punjab with 68 percent in 2012-13 as compared to 67 percent in 2010-11.

4.3 Electricity & Gas

In PSLM survey information is collected from households about the major source used for lighting. For this purpose following categories are included, electricity, gas\kerosene oil, candles and others. Fire wood is included in the other category.

Table 4.5 shows that 93 percent of households in 2012-13 as compared to 91 percent in 2010-11 were using electricity as a source for lighting. This percentage is higher in urban areas, 98 percent as compared to 90 percent in rural areas. Provincial comparison shows that use of electricity as a source of lighting is highest in Punjab with 95 percent in 2012-13 as compared to 93 percent in 2010-11 followed by KPK with 94 percent in 2012-13 as compared to 93 Percent in 2010-11, Sindh with 91 percent in 2012-13 as compared to 90 Percent in 2010-11 and Balochistan with 79 percent in 2012-13 as compared to 72 percent in 2010-11. In Islamabad (Federal Capital), 98 percent households are using electricity as a source of lighting. While comparing districts, Narowal and Mandi Bahuddin with 100 percent, Shahdadkot with 99 percent, Bannu with 100 percent & Mastung and Quetta with 100 percent are the top ranked districts within their respective provinces. Whereas, districts Rajanpur with 73 percent , Tharparkar with 48 percent , Tor Garh with 42 percent and Dera Bugti with 28 percent have the lowest usage within their respective provinces.

Similarly in PSLM Survey information is collected from households about the major fuel used for cooking. Different sources of fuel used for cooking have been discussed like electricity, gas\kerosene oil, wood\charcoal and others (dung cake and crop residue are included in the others category).

Table 4.6 indicates that the vast majority of households, 62 percent are using wood\charcoal or other as fuel for cooking in overall Pakistan. This percentage is higher in rural areas, 86 percent as compared to only 16 percent in urban areas. Provincial level comparison shows that 69 percent household in Balochistan in 2012-13 as compared to 66 percent in 2010-11 followed by 67 percent in KPK in 2012-13 as compared to 76 Percent in 2010-11, 43 percent in Sindh in 2012-13 as compared to 45 Percent in 2010-11 and 40 percent households in Punjab in 2012-13 as compared to 41 percent in 2010-11 are using wood\charcoal as fuel for cooking. At national level 38 percent of households are using gas\kerosene oil as fuel for cooking as compared to 35 percent in 2010-11. Use of gas\kerosene oil as fuel for cooking is higher in urban areas, 84 percent as compared to 14 percent in rural areas. Provincial level comparison shows that 53 percent household in Sindh in 2012-13 as compared to 51 percent in 2010-11 followed by 36 percent in Punjab in 2012-13 as compared to 33 Percent in 2010-11, 26 percent in KPK in 2012-13 as compared to 22 Percent in 2010-11 and 23 percent households in Balochistan in 2012-13 as compared to 27 percent in 2010-11 are using gas\kerosene oil as fuel for cooking. In Islamabad (Federal Capital) 80 percent household are using gas\kerosene oil as a fuel for cooking. While comparing districts, Lahore with 90 percent, Karachi with 98 percent & Peshawar with 78 percent and Quetta with 95 percent are the top ranked districts within their respective provinces.

4.4 Sources of Drinking Water

In PSLM Survey, questions are asked to know the main source of drinking water. According to this information is collected about tap water, motorised pumping, hand pump, dug well and others. The category others include tanker, mineral water, filtration plant and sea\river\pond\stream. Tap water is a delivery system where the water is delivered through a network of pipes and the water is treated before it is supplied. In urban areas generally, water comes in to house through pipes and is stored in tanks, built in the house. Then the water for the use of household is lifted to small tanks built at the top of the house, such system should be recorded as tap water supply. Hand Pump is a pump operated manually to draw water from a bored hole. Sometimes hand pump and motor are operated at the same hole. Dug well is of two types opened and closed well closed well is a dug well with a covering and opened well is a dug well without covering.

In overall Pakistan 30 percent of households are using tap water as main source of drinking water in 2012-13 as compared to 32 percent in 2010-11 followed by motor pump with 30 percent in 2012-13 as compared to 27 percent in 2010-11 and hand pump with 27 percent in 2012-13 as compared to 28 percent in 2010-11 (Table 4.7). Percentage of household using tap water as a main source of drinking water is higher in urban areas, 56 percent as compared to only 17 percent in rural areas, and decreasing pattern has been

observed for last few years and motorized pumping as a main source of drinking water is increasing. Provincial level comparison shows that number of households use tap water as a main source of drinking water is highest in KPK with 44 percent in 2012-13 as compared to 45 percent in 2010-11 followed by Sindh with 43 Percent in 2012-13, Balochistan with 34 percent in 2012-13 as compared to 35 percent in 2010-11 and Punjab with 22 percent in 2012-13 as compared to 24 percent 2010-11. In Islamabad (Federal Capital), 54 percent household are using tap water as main source of drinking water. While comparing districts, Lahore with 74 percent, Karachi with 86 percent & Chitral with 83 percent and Quetta with 83 percent are the top ranked districts in their respective provinces. On the other hand Hafizabad with 2 percent, Shikarpur with 1 percent, Kohistan with 6 percent and Musa Khel with almost no household using tap water as main source of drinking water are the bottom ranked districts in their respective provinces. The main source of drinking water in rural areas is hand pump, 37 percent as compared to 8 percent in urban areas.

4.5 Toilets

Sanitation is also an important indicator of MDG. Toilet is a fixture for defecation and urination, consisting of a bowl fitted with a hinged seat and connected to a waste pipe and a flushing apparatus. In the questionnaire response was recorded regarding the type of toilet used by the household. A toilet, which is used by the household and is situated in the yard, is considered as a toilet in the household. The following are common types of toilets covered through PSLM Questionnaire.

- ***Flush to sewerage*** is used to flush away the waste, which drains into the public sewerage system.
- ***Flush to septic tank*** is used to flush away the waste, which is disposed of and accumulated in a septic tank/soak pit located under or near the toilet. A septic tank is a concrete structure, which can be cleaned and used permanently.
- ***Flush connected open drain*** the flushed waste is channelled through a drain, which is uncovered.
- ***A soak pit is a "katcha"*** structure, which is closed, once it is filled up. It is designed so that water disappears into the ground.
- ***Dry raised latrine No flush*** a "khuddi" is used and the waste matter is taken away by a sweeper/jamadar.
- ***Pit latrine*** A hole is dug in the ground, connected to a pit in which the waste matter is accumulated. The hole is closed once the pit is filled up.

Overall in Pakistan 71 percent of household are using flush toilet facility in 2012-13 as compared to 66 percent in 2010-11.Percentage of households using flush toilet is higher in urban areas, 97 percent as compared to 57 percent in rural areas. Provincial level comparison shows that the highest number of household in Punjab with 77 percent in 2012-13 are using flush toilet as compared to 72 percent in 2010-11 followed by KPK with 71 percent in 2012-13 as compared to 62 percent in 2010-11, Sindh With 63 percent

in 2012-13 as compared to 62 Percent in 2010-11 and Balochistan with 30 percent in 2012-13 as compared to 31 percent in 2010-11 (Table 4.8). In Islamabad (Federal Capital), 99 percent households are using flush toilet facility. While observing district level pattern, Lahore with 98 percent, Karachi with 97 percent, Peshawar with 88 percent and Quetta with 82 percent are top ranked districts in their respective provinces.

Overall there are only 15 percent household in 2012-13 that do not have toilet facility as compared to 18 percent in 2010-11 (Table 4.8). This varies greatly between urban and rural areas, 1 percent of urban households have reported no toilet facility as compared to 22 percent of rural household. Provincial level comparison shows that Punjab has the highest percentage of households reporting no toilet with 18 percent in 2012-13 as compared to 23 percent in 2010-11 followed by Balochistan with 15 percent in 2012-13 as compared to 13 percent in 2010-11, KPK with 13 percent in 2012-13 as compared to 18 percent in 2010-1, while Sindh remained stable at 8 percent between 2010-11 to 2012-13. While observing district level pattern, Jhang with 45 percent Tharparkar with 47 percent, Kohistan with 77 percent and Loralai with 54 percent are the districts with the highest percentage of households without any toilet facility in their respective provinces.

5. Household Perception of Economic Situation and Satisfaction by Facilities and Service Use.

5.1 Introduction

Government is giving special emphasis to improve the economic situation of people by providing different types of facilities\services, it is necessary for the government to have an overview of how the people perceive their wellbeing against the different facilities provided by the government. This will help the government with necessary information about the priority sectors to properly address the multifaceted problems and the areas of concern associated with these sectors. Accordingly the respondents were asked to give their perception of their economic situation as well as community improvement and how effectively services/ facilities were available to them.

5.2 Perception of Economic Situation

Households were asked to compare their economic situation with last year. (Table 5.1) In response to this question, 43 percent in 2012-13 reported no change as compared to 40 percent in 2010-11, 37 percent reported worse or much worse in 2012-13 as compared to 43 in 2010-11 and 20 percent reported better or much better in 2012-13 as compared to 16 percent in 2010-11. District level position shows that Islamabad (Federal Capital) with 24 percent, Bhakhar with 62 percent, Sanghar with 42 percent, Charsada with 56 percent and Jhal Magsi with 89 percent have highest proportion of household who have replied that economic situation is worse or much worse within their respective provinces. However, when asked to compare the economic situation of the community where they live (Table 5.2), 60 percent in 2012-13 as compared to 54 percent in 2010-11 reported no change, 19 percent reported worse or much worse in 2012-13 as compare to 29 percent in 2010-11 and 16 percent reported better or much better in 2012-13 as compare 12 percent in 2010-11.

5.3 Satisfaction by Facilities and Service Use

Households were also asked to give opinion about their satisfaction of the Facilities / Services provided by the government (Table 5.3). The information for the year 2012-13 is not comparable with previous years, as in the earlier reports the denominator includes all the household whether used the facilities or not, but this time the pattern of the table has been changed and the denominator includes only those household who are using the facility. It was observed that only 53 percent of the household were satisfied from Govt Basic health facility, 76 percent of the household were satisfied with the Family Planning Service, 93 percent household were satisfied with Schools, 62 percent of household with Veterinary Services, 62 percent of household with Agriculture Extension and 48 percent of household with Police.

APPENDIX A: TECHNICAL NOTES

TECHNICAL NOTES PART A

DEFINITIONS OF SOME KEY INDICATORS

PRIMARY GROSS ENROLMENT RATE:-
Number of children attending primary level (classes 1-5) divided by number of children aged 5-9 years multiplied by 100.Enrolment in Katchi is excluded.

PRIMARY NET ENROLMENT RATE:-
Number of children attending primary level (classes 1-5) aged 5-9 years divided by children aged 5-9 years multiplied by 100.Enrolment in Katchi is excluded.

MIDDLE GROSS ENROLMENT RATE:-
Number of children attending middle level (classes 6-8) divided by number of children aged 10-12 years multiplied by 100.

MIDDLE NET ENROLMENT RATE:-
Number of children aged 10-12 years attending middle level (classes 6-8) divided by number of children aged 10-12 years multiplied by 100.

MATRIC GROSS ENROLMENT RATE:-
Number of children attending matric level (classes 9-10) divided by number of children aged 13-14 years multiplied by 100.

MATRIC NET ENROLMENT RATE:-
Number of children aged 13-14 years attending matric level (classes 9-10) divided by number of children aged 13-14 years multiplied by 100.

LITERACY RATE:-
Population aged 10 years and older that can read and write with understanding expressed as percentage of total population aged 10 years and older.

GENDER PARITY INDEX:-
The GPI at primary or secondary is defined as net enrolment rate of females at primary or secondary level divided by net enrolment rate of males in primary or secondary level.

YOUTH GENDER PARITY INDEX:
Youth literacy GPI is defined as persons who are 15-24 years old and literate divided by total number of persons 15-24 years old.

BASED ON RECALL-ATLEAST ONE IMMUNISATION:-
Children aged 12-23 months reported as having received at least one immunisation expressed as percentage of all children aged 12-23 months.

BASED ON RECORD –FULLY IMMUNIZED:-
Children aged 12-23 months who reported having received full immunisation who also have an immunisation card, expressed as a percentage of all children aged 12-23 months. To be classified as fully immunised a child must have received: 'BCG', DPT1, DPT2, DPT3, polio1, polio2, polio3 and Measles.

DIARRHEA:-
Children less than 5 years who suffered from diarrhea in the last 30 days expressed as percentage of all children aged less than 5 years.

PRE-NATAL:-
Ever married women aged 15 – 49 years who had given birth in the last three years and who had attended at least one pre-natal consultation during the last pregnancy, expressed as a percentage of all ever married women aged 15 – 49 years who had given birth in the last three years.

POST-NATAL:-
Postnatal is the period beginning immediately after the birth of a child and extending for about six weeks.
Ever married women aged 15-49 years who received post-natal check-up expressed as a percentage of all ever married women aged 15-49 years who had a birth in the last three years.

TETANUS TOXOID INJECTIONS:-
Currently married women aged 15-49 years who had a birth in the last three years and received a tetanus toxoid injection during the last pregnancy, expressed as a percentage of all currently married women aged 15-49 years who had a birth in the last three years.

TECHNICAL NOTES PART B

Annexure-I

ESTIMATION PROCEDURE ADOPTED FOR PSLM SURVEY

NOTATIONS:

N_h = Total number of Primary Sampling Units (PSUs) in the hth stratum of a province.

n_h = Total number of sample PSUs in the hth stratum of a province.

M_{hi} = Total number of Secondary Sampling Units (SSUs) in the ith sample PSU of hth stratum of a province.

m_{hi} = Number of sample SSUs in the ith sample PSU of hth stratum of a province.

P_{hi} = Assigned probability of selection of ith PSU of the hth stratum of a province.

y_{hij} = Value of any characteristic y of jth SSU within ith PSU of hth stratum of a province.

x_{hij} = Value of any characteristic x of jth SSU within ith PSU of hth stratum of a province with whose respect proportion is required.

(i): ESTIMATION FORMULAE FOR TOTALS AND THEIR VARIANCES

$$N = \sum_{h=1}^{L} N_h$$

$$n = \sum_{h=1}^{L} n_h$$

$$\hat{Y}_h = \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{\hat{Y}_{hi}}{p_{hi}}$$

OR

$$\hat{Y}_h = \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{1}{p_{hi}} \frac{M_{hi}}{m_{hi}} \sum_{j=1}^{m_{hi}} y_{hij}$$

$$\hat{Y} = \sum_{h=1}^{L} \hat{Y}_h = \sum_{h=1}^{L} \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{\hat{Y}_{hi}}{p_{hi}}$$

For X, another variable of interest, we have

$$\hat{X}_h = \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{\hat{X}_{hi}}{P_{hi}} = \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{1}{P_{hi}} \frac{M_{hi}}{m_{hi}} \sum_{j=1}^{m_{hi}} x_{hij}$$

$$\hat{X} = \sum_{h=1}^{L} \hat{X}_h = \sum_{h=1}^{L} \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{\hat{X}_{hi}}{p_{hi}}$$

$$\hat{R} = \frac{\hat{Y}}{\hat{X}}$$

$$v(\hat{y}_h) = \frac{1}{n_h} s^2{}_{ht} = \frac{1}{n_h(n_h-1)} \left(\sum_{i=1}^{n_h} \frac{\hat{Y}^2{}_{hi}}{P^2{}_{hi}} - \frac{(\sum_{i=1}^{n_h} \frac{\hat{y}_{hi}}{P_{hi}})^2}{n_h} \right)$$

$$v(\hat{Y}) = \sum_{h=1}^{L} \frac{1}{n_h} s^2{}_{ht} = \sum_{h=1}^{L} \frac{1}{n_h(n_h-1)} \left(\sum_{i=1}^{n_h} \frac{\hat{Y}^2{}_{hi}}{P^2{}_{hi}} - \frac{(\sum_{i=1}^{n_h} \frac{\hat{y}_{hi}}{P_{hi}})^2}{n_h} \right)$$

(ii): FORMULA FOR RATIO ESTIMATES

$$r = \frac{\hat{Y}}{\hat{X}}$$

Where Y^ and X^ can be estimated by equations under item (i) given above.

$$Rel\ V(r) = \frac{1}{\hat{X}^2} \sum_{h=1}^{L} \frac{1}{n_h} s^2{}_{hb} + \frac{1}{\hat{x}^2} \sum_{h=1}^{L} \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{M^2{}_{hi}}{p^2{}_{hi} m_{hi}} \frac{(M_{hi} - m_{hi})}{M_{hi}} s^2{}_{hw}$$

Where

$s^2_{hb} = s^2_{ht} - s^2_{hw}$

$$s^2_{ht} = s^2_{hy} + r^2 s^2_{hx} - 2r\, s_{hxy}$$

$$s^2_{hx} = \frac{1}{(n_h - 1)}\left[\sum_{i=1}^{n_h} \frac{\hat{x}^2_{hi}}{p^2_{hi}} - \frac{\left(\sum_{i=1}^{n_h} \frac{\hat{x}_{hi}}{p_{hi}}\right)^2}{n_h}\right]$$

$$s_{hxy} = \frac{1}{n_h - 1}\left[\sum_{i=1}^{n_h}\left(\frac{\hat{X}_{hi}}{p_{hi}}\frac{\hat{y}_{hi}}{p_{hi}}\right) - \frac{\left(\sum_{i=1}^{n_h} \frac{\hat{X}_{hi}}{P_{hi}}\right)\left(\sum_{i=1}^{n_h} \frac{\hat{y}_{hi}}{P_{hi}}\right)}{n_h}\right]$$

$$s^2_{hy} = \frac{1}{(n_h - 1)}\left[\sum_{i=1}^{n_h} \frac{\hat{y}^2_{hi}}{p^2_{hi}} - \frac{\left(\sum_{i=1}^{n_h} \frac{\hat{y}_{hi}}{p_{hi}}\right)^2}{n_h}\right]$$

$$s^2_{hw} = \frac{1}{n_h - 1}\sum_{i=1}^{n_h} \frac{1}{p^2_{hi}} \frac{M^2_{hi}}{m_{hi}} \frac{(M_{hi} - m_{hi})}{M_{hi}} s^2_{hi}$$

And

$$s^2_{hi} = s^2_{hiy} + r^2 s^2_{hix} - 2r\, s_{hixy}$$

$$s^2_{hiy} = \frac{1}{(m_{hi} - 1)} \left[\sum_{j=1}^{m_{hi}} y^2_{hij} - \frac{\left(\sum_{j=1}^{m_{hi}} y_{hij} \right)^2}{m_{hi}} \right]$$

$$s^2_{hix} = \frac{1}{(m_{hi} - 1)} \left[\sum_{j=1}^{m_{hi}} x^2_{hij} - \frac{\left(\sum_{j=1}^{m_{hi}} x_{hij} \right)^2}{m_{hi}} \right]$$

$$s^2_{hixy} = \frac{1}{(m_{hi} - 1)} \left[\sum_{j=1}^{m_{hi}} x_{hij}\ y_{hij} - \frac{\left(\sum_{j=1}^{m_{hi}} x_{hij} \sum_{j=1}^{m_{hi}} y_{hij} \right)}{m_{hi}} \right]$$

List of Officers Involved In PSLM Survey 2012-13

The PSLM report is produced by the efforts of the following officers of Pakistan Bureau of Statistics listed under the specific tasks:

PLANNING, EXECUTION OF SURVEY AND FINALIZATION OF REPORT: -

- **Mr. Ayazuddin — Deputy Director General**
- **Ms. Rabia Awan — Chief Statistical Officer**
- **Mr. Saqib Sultan Khawar — Statistical Officer**
- **Mr. Sharifullah Marwat — Statistical Officer**
- **Ms. Hina Kanwal — Statistical Officer**
- **Ms. Kaneez Amna — Statistical Officer**
- **Ms. Sana Habib Chaudhary — Statistical Officer**

MANAGEMENT TEAM:-

- **Mr.Rana Muhammad Ismail — Chief Statistical Officer**
- **Mr.Sajid Akhtar Lodhi — Statistical Officer**
- **Ms. Safia Begum — Statistical Officer**
- **Ms. Kulsoom Fatima — Statistical Assistant**
- **Ms. Samina Farooq — Statistical Assistant**
- **Khalid Rafique — Statistical Assistant**
- **Malik Latifullah — Statistical Assistant**
- **Muhammad Irfan Khan — Statistical Assistant**

DATA PROCESSING:-

- **Mr. Dost Muhammad — Deputy Director General**
- **Mr. Mumtaz Uddin Shaikh — Director**
- **Mr. Arif Akhtar — Chief System Analyst**
- **Mr. Azizullah Bhatti — Chief System Analyst**
- **Mr. Mudasir Akhtar — Data Processing Officer**
- **Mr. Tahir Mahmood — Data Processing Assistant**

SAMPLE DESIGN: -

- **Mr. Rizwan Bashir — Chief Statistical Officer**

FIELD OPERATIONS: -

- **Mr. Mujahid Hussain — Director**
- **Mr. Fazil Baig — Director**

TABLE 2.1 POPULATION THAT HAS EVER ATTENDED SCHOOL BY- PROVINCE AND DISTRICTS.

NOTES:

1. Population aged 10 years and older that has ever attended school expressed as a percentage of the total population aged 10 years and older.
2. Attended school: all those individuals who have ever attended school (either currently attending, or attended in the past) were taken to have attended school.

TABLE 2.1 POPULATION THAT HAS EVER ATTENDED SCHOOL BY- PROVINCE AND DISTRICTS.

NOTES:

1. Gross enrolment rate: [Number of children attending primary level (classes 1-5) divided by number of children aged 5 - 9 years] multiplied by 100. Enrolment in katchi is excluded.
2. Numerator of GER: Raised sum of all individuals who report currently attending primary level.
3. Denominator of GER: Raised sum of all individuals aged 5 - 9 years who respond to the relevant questions.

NOTES:

1. Net enrolment rate in government primary schools: [Number of children aged 5 - 9 years attending government primary schools (classes 1-5) divided by number of children aged 5 - 9 years] multiplied by 100. Enrolment in katchi is excluded.
2. Numerator of NER: Raised sum of all individuals aged 5 - 9 years who report currently attending primary level in Government schools, excluding katchi.
3. Denominator of NER: Raised sum of all individuals aged 5 - 9 years who responded to the relevant questions.

NOTES:

1.Gross enrolment rate: [Number of children attending middle level (classes 6 - 8) divided by number of children aged 11 - 13 years] multiplied by 100

2.Numerator of GER: Raised sum of all individuals who report currently attending middle level (class 6 - 8).

3.Denominator of GER: Raised sum of all individuals aged 11 - 13 years who respond to the relevant questions.

NOTES:

1.Net enrolment rate: [Number of children aged 10 - 12 years attending middle level (classes 6 - 8) divided by number of children aged 10 - 12 years] multiplied by 100

2. Numerator of NER: Raised sum of all individuals aged 10 - 12 years who report currently attending middle level.

3. Denominator of NER: Raised sum of all individuals aged 10 - 12 years who respond to the relevant questions.

NOTES:
1. Gross enrolment rate: [Number of children attending matric level (classes 9 - 10) divided by number of children aged 13 - 14 years] multiplied by 100.
2. Numerator of GER: Raised sum of all individuals who report currently attending Matric level.
3. Denominator of GER: Raised sum of all individuals aged 13 - 14 years who respond to the relevant questions.

NOTES:

1.Population aged 15 years and older that is literate expressed as a percentage of the population aged 15 years and older.

2.Literacy: For all surveys, literacy is taken as the ability to read a newspaper and to write a simple letter.

NOTES:
1. Note that even the record-based measure cannot be based exclusively on vaccinations recorded on the health card, since it is not possible to identify the source of the information on each antigen. Instead, it is calculated for all children who had a health card, using all immunizations reported, whether or not these were recorded on the card. It is likely that most will have been recorded on the card.

2.. Full immunization means that the child has received: BCG, DPT1, DPT2, DPT3, Polio1, Polio2, Polio3 and measles.

NOTES:

1. Note that even the record-based measure cannot be based exclusively on vaccinations recorded on the health card, since it is not possible to identify the source of the information on each antigen. Instead, it is calculated for all children who had a health card, using all immunizations reported, whether or not these were recorded on the card. It is likely that most will have been recorded on the card.
2. Full immunization means that the child has received: BCG, DPT1, DPT2, DPT3, Polio1, Polio2, Polio3 and measles.
3. Based on record: Children who reported having received full immunisation who also have an immunisation card, expressed as a percentage of all children

TABLE 3.4: PERCENTAGE OF CHILDREN AGED 12-23 MONTHS THAT HAVE BEEN IMMUNIZED

NOTES:

1. Children who have suffered from diarrhoea in last 30 days prior to the date of interveiw are expressed a percentage of all children aged less than 5 years .
2. Diarrhoea in past 30 days : The survey 2012-13 contained a question addressed to the mothers of all the children aged less than 5 years where they were asked whether they had suffered from an episode of diarrhoea in the past 30 days.

NOTES:
1.Diarrhoea cases where a practitioner was consulted expressed as a percentage of all diarrhoea cases during past 30 days in children under 5 years.
2.Cases where a practitioner was consulted: For all the children that reported an episode of diarrhoea in the past 30 days the mothers were asked whether they consulted a practitioner for the ailment. The statistics reported here represent the percentage of cases where a practitioner was consulted.
