

## **PREFACE**

Pakistan Social and Living Standards Measurement Survey (PSLM), 2006-07 is the third round of a series of surveys planned to be conducted up to 2009. The survey has been conducted with the aim to provide data for use by the government in formulating the poverty reduction strategy as well as development plans at district level and rapid assessment of programmes initiated under Poverty Reduction Strategy Paper (PRSP) and Medium Term Development Framework (MTDF) in the overall context of MDGs.

The report containing National/ Provincial level indicators was released in December 2007. This report contains detailed district level indicators and has been developed from a sample survey covering approximately 73,953 households in the sectors such as Education, Health, Water Supply & Sanitation and Household Economic Situation & Satisfaction by facilities and services use. This report provides information on the key social indicators at national, as well as at provincial/ district levels with urban/ rural breakdown in comparison with the information of the last round of PSLM 2004-05, where ever possible.

The report contains five chapters. These are: Introduction, Education, Health, Housing, Water Supply & Sanitation, Household Perception of Economic Situation and Satisfaction by Facilities and Services Use.

Comments and suggestions for improving future issues of this report will be most welcome.

## EXECUTIVE SUMMARY

This report presents district level findings in continuation of the report on the National/Provincial findings of the third round of the Pakistan Social and Living Standards Measurement (PSLM) Survey 2006-07. In this survey, 73953 households were covered in the entire country and information was collected from households on a range of social sector issues. These are primarily focussed on the sectors covered under Poverty Reduction Strategy Paper (PRSP) i.e. Education, Health, Household Assets/ Amenities, Immunisation, Pre/Post Natal care of females and Household satisfaction by facilities and services in the overall context of Millennium Development Goals (MDGs).

Indicators between different groups are presented disaggregated by province/district, by region (urban-rural) and by gender. The indicators given in the report have been compared with the previous reports of PSLM surveys, wherever possible.

### Education

The Gross Enrolment Rate (GER) for primary schools (Age 5-9) has increased from 87 percent in 2005-06 to 91 percent in 2006-07. Narowal district in the Punjab, Karachi in Sindh, Abbottabad in N.W.F.P and Mastung in Balochistan with GRE; 147 percent, 112 percent, 114 percent, and 121 percent respectively have been ranked as top districts within the provinces. The Net Enrolment Rate (NER) was 56 percent in 2006-07, substantially lower than the Gross Enrolment Rate because of the enrolment of overage children in primary schools; however, it has also increased significantly between 2005-06 to 2006-07 i.e. from 52 to 56 percent. Narowal (88 percent) in the Punjab, Karachi (66 percent) in Sindh, Abbottabad (73 percent) in N.W.F.P and Mastung (68 percent) in Balochistan has been ranked on the top in the respective province. The PSLM survey collects information on enrolment in all types of schools i.e. public and private. The PSLM round shows increase in the share of primary enrolments that are in government schools. The overall share has increased from 65 percent in 2005-06 to 69 percent in 2006-07. However, some of the poorest districts such as Bhakkar (Punjab), Tharparkar (Sindh), Upper Dir (N.W.F.P) and Dera Bugti (Balochistan) have shown over 95 percent government enrolment.

The GER (Age 10-12) at National level for middle level has increased from 49 in 2005-06 to 51 per cent in 2006-07 where as the NER has remain steady at 18 percent. Islamabad (96 percent) in the Punjab, Karachi (71 percent) in Sindh, Haripur (97 percent) in N.W.F.P and Quetta (73 percent) in Balochistan are ranked top within the provinces for Middle class GER. However, NER which gives more realistic picture shows that Islamabad (40 percent) in the Punjab, Karachi (26 percent) in Sindh, Abbottabad (34 percent) in N.W.F.P and Quetta (20 percent) in Balochistan are top districts within the respective province.

The Matric Level (Age 13-14) GER has increased from 44 percent in 2005-06 to 48 percent in 2006-07 and NER remain constant at 10 percent. The real impact of increase in GRE and NER at matric level will be observable after four/five years when

the existing primary level cohort reach at Matric Level. The districts of Islamabad (102 percent), Karachi (72 percent), Abbottabad (78 percent) and Quetta (69 percent) in the Punjab, Sindh, N.W.F.P and Balochistan respectively are at the top within the provinces for Matric GER. As far as NER is concerned, Islamabad (28 percent) in the Punjab, Karachi (15 percent) in Sindh, Abbottabad (15 percent) in N.W.F.P and Quetta (11 percent) are the top districts.

The literacy level of population (10 years & above) has shown improvement. This has risen from 54 percent in 2005-06 to 55 percent in 2006-07. This increase has taken place in both for men and women and across all provinces. Adult literacy (15 years & above) has also been worked out, it has increased from 51 percent in 2005-06 to 52 percent in 2006-07. Islamabad (87 percent) in the Punjab, Karachi (77 percent) in Sindh, Abbottabad (67 percent) in N.W.F.P and Quetta (62 percent) in Balochistan are top districts within the provinces for literate persons over age 10 years and above. Karachi district is at the top in Literacy in Pakistan.

## **Health**

The PSLM report includes sickness/injuries, immunisation, diarrhoea and the use of pre and post-natal services. The sickness / injuries within last two weeks show the prevalence rate of 6.27 percent in 2006-07 compared to 7.10 percent in 2004-05 and 94.44 percent cases these people visited health consultants. Prevalence of sickness / injuries is lower in most of the districts in the Punjab compared to other provinces. Lakki Marwat (N.W.F.P) district with little over 12 percent has the highest prevalence rate among all the districts.

Two measures of immunisation coverage are presented. Based on mother's recall, at least one immunisation has increased from 83 percent in 2004-05 to 86 percent in 2006-07. The measure that includes mother's recall as well as record of immunisations given to the child shows a rise from 71 percent in 2005-06 to 76 percent in 2006-07 in the proportion of one year old that are fully immunised. Gujrat 100 percent, Karachi 82 percent, and Charsada 97 percent, and Mastung almost 100 percent are top ranked districts in the Punjab, Sindh, N.W.F.P, and Balochistan provinces respectively.

There has been a decrease in the proportion of children under five suffering from diarrhoea i.e. from 12 percent in 2005-06 to 11 percent in 2006-07. Sindh has shown increase from 8 percent in 2005-06 to 12 percent in 2006-07 and this increase is particularly notable for female i.e. from 7 percent in 2005-06 to 12 percent in 2006-07 which may be attributed to shortage of clean water availability in many districts in the recent past. T.T Singh 22 percent in the Punjab province, Mir Pur Khas 19 percent in Sindh province, D.I Khan 20 percent in NWFP and Awaran 31 percent in Balochistan province are the most affected districts within each province.

Pre Natal consultation for pregnant females has increased from 52 percent in 2005-06 to 53 percent in 2006-07 during their last pregnancy. Prenatal consultations were much more common in urban than in rural areas but there is also considerable

improvement. Islamabad 91 percent, Karachi 90 percent, Nowshera 87 percent and Gwadar 72 percent are at the top ranks within the provinces. The frequency of post-natal consultations of 24 percent in 2006-07 was comparatively lower than the frequency of pre-natal check-ups but it has also improved from 22 percent in 2005-06.

Fifty six percent of pregnant women received Tetanus Toxoid injection in 2006-07 compared to 51 percent in 2004-05. Islamabad (93 percent) in the Punjab, Karachi (79 percent) in Sindh, Nowshera (85 percent) in N.W.F.P and Quetta and Kharan (61 percent) in Balochistan are at top ranks within the provinces.

### **Housing, Water Supply & Sanitation**

The housing units by tenure reveal that 86 per cent in 2006-07 compared to 87 percent in 2004-05 of all households reported that they have own dwelling units while 7 percent of households have rented dwelling unit and about 6 percent have rented free house but a small number of 1 percent households have on subsidized housing units. In Islamabad (Federal Capital) 43 percent (37 percent in 2004-05) households live in rented or subsidized rented units compared to 52 percent (59 percent live in 2004-05) live in their own housing units. In PSLM 2006-07 the comparison of housing units by number of rooms with the 2004-05 indicate that housing units with one room have shown marginal improvement from 24.20 in 2004-05 to 24.33 percent in 2006-07 , 2-4 rooms increased from 68.71 percent in 2004-05 to 69.05 percent in 2006-07 and more than five rooms decreased from 7.09 percent in 2004-05 to 6.62 percent in 2006-07. The housing units having electricity (as sources of lighting) have increased from 83.85 percent in 2004-05 to 86.61 percent in 2006-07. Nowshera is at the top with 99.84 percent households having electricity connections and approximately all big cities are over 99 percent. Use of Gas (as cooking fuel) has increased from 29.45 in 2004-05 to 29.99 percent in 2006-07. Quetta followed by Karachi are the top two districts in the country with 92.26 percent and 92.04 percent gas connections respectively.

There has been improvement in Tap Water supplies from 34 percent to 36 percent between 2005-06 and 2006-07. The vast majority of the rural population of Punjab has either hand pump or water from a motor pump and only 5 percent of the rural population depend on a dug well or other sources (river, canal or stream). The supply of tap water for urban areas in Balochistan is 81 percent which is highest among all the provinces. The rural water supply situation in NWFP is still not better but is worst in Balochistan. In these two provinces, 41 and 67 percent of the rural population, respectively, depend on water from a dug well or from a river/canal/stream. Lahore 80.14 percent in the Punjab, Karachi 87.53 percent in Sindh, Nowshera 62.32 percent in N.W.F.P and Quetta 86.90 percent in the Balochistan are the top districts within provinces which have piped water facility.

Access to flush toilets remains constant in rural areas between 2005-06 to 2006-07 however, non-flush has improved from 15 percent to 21 percent. Households with no toilet in rural areas have declined from 44 percent in 2005-06 to 39 percent in 2006-

07. The top ranked districts within the provinces having flush toilet facility are Lahore 93 percent, Karachi 94 percent, Abbottabad 77 percent, and Quetta 82 percent.

### **Household Perception of Economic Situation and Satisfaction by Facilities and Services**

Households were asked to compare their economic situation with last year. In response to this question 51.52 percent in 2006-07 reported no change (51.51 percent in 2004-05), 21.35 percent reported worse or much worse (23.92 percent in 2004-05) and 26.99 percent reported better or much better (24.15 percent in 2004-05). However, when asked to compare the economic situation of the community where they live, 59.24 percent in 2006-07 reported the same (59.08 percent in 2004-05), 10.27 percent reported worse or much worse (9.56 percent in 2004-05) and 25.93 percent reported better or much better (25.17 percent in 2004-05).

Households were also asked to give opinion about their satisfaction of the Facilities / Services provided by the government. In response to this question, 35.31 percent in 2006-07 reported satisfaction on Govt Basic Health Facilities (35.94 percent in 2004-05), 12.07 percent satisfied with the Family Planning Services (10.47 percent in 2004-05), 61.23 percent with Schools (59.84 percent in 2004-05), 13.97 percent with Veterinary Services pre-dominantly rural (11.82 percent in 2004-05), 14.13 percent with Agriculture Extension all rural (10.94 percent in 2004-05) and 6.6 percent with police (6.5 percent in 2004-05).

## **1. Introduction**

### **1.1 The PSLM**

The Pakistan Social and Living Standards Measurement Survey is one of the main mechanisms for monitoring the implementation of the PRSP in the overall context of MDGs. It provides a set of district level representative, population-based estimates of social indicators and their progress under the PRSP. These include intermediate as well as 'output' measures, which assess what is being provided by the social sectors – enrolment rates in education, for example. They include a range of 'outcome' measures, which assess the welfare of the population Immunisation Rate, for example. Policymakers need to know, for example, whether the poor have benefited from the programme or whether increased government expenditure on the social sectors has been captured by the better off

In the remainder of this introduction, a description of the 2006-07 PSLM Survey is provided. In the following chapters, data relating education, health, household assets / amenities, immunisation, pre and postnatal care and satisfaction of services is given.

### **1.2 SAMPLE DESIGN OF PSLM SURVEY 2006-2007 (DISTRICT LEVEL)**

**Universe:** The universe of this survey consists of all urban and rural areas of the four provinces and Islamabad excluding military restricted areas.

**Sampling Frame:** FBS has developed its own urban area frame, which was up-dated in 2003. Each city / town has been divided into enumeration blocks consisting of 200-250 households identifiable through sketch map. Each enumeration block has been classified into three categories of income groups i.e. low, middle and high keeping in view the living standard of the majority of the people. List of villages published by Population Census Organization obtained as a consequence of Population Census 1998 has been taken as rural frame.

#### **Stratification Plan:**

**A. Urban Domain:** Islamabad, Lahore, Gujranwala, Faisalabad, Rawalpindi, Multan, Bahawalpur, Sargodha, Sialkot, Karachi, Hyderabad, Sukkur Peshawar and Quetta, have been considered as large sized cities. Each of these cities constitutes a separate stratum and has further been sub-stratified according to low, middle and high-income groups. After excluding population of large sized city (s), the remaining urban population in each district in all the provinces has been grouped together to form a stratum.

**B. Rural Domain:** Each district in the four provinces of Pakistan has been treated an independent stratum.

**Sample Size and Its Allocation:** Keeping in view the objectives of the survey the sample size for the four provinces has been fixed at 73953 households comprising 5198 sample

villages / enumeration blocks, which is expected to produce reliable results at the district level.

**Sample Design:** A two-stage stratified sample design has been adopted in this survey.

**Selection of Primary Sampling Units (PSUs):** Villages and enumeration blocks in urban and rural areas respectively have been taken as Primary Sampling Units (PSUs). Sample PSUs have been selected from strata/sub-strata with PPS method of sampling technique. Village wise population of 1998 census and enumeration block wise number of household collected in 2002-03 updation of urban sampling frame have been treated as measure of size for selection of sample PSUs in rural and urban strata.

**Selection of Secondary Sampling Units (SSUs):** Households within sample PSUs have been taken as Secondary Sampling Units (SSUs). A specified number of households i.e 16 and 12 from each sample PSU of rural & urban area have been selected respectively using systematic sampling technique with a random start. Detailed sampling plan is attached as Appendix- A

### **1.3 Objectives and scope of analysis**

This is the second analytical report containing district level indicators of the PSLM Survey. It provides an overview of the findings in all sectors at district levels. Given that the PSLM is a large, complex household survey that collects information on a number of different topics, the tabulations presented here comprise the detailed tables at National/ Provincial/ District levels in continuation of the National / Provincial level report which has already been released

### **1.4 Data Quality and Reliability Measures**

Data quality in PSLM Survey has been ensured through built in system of checking of fieldwork by the supervisors in the field as well as teams from the headquarters. Regional/ Field offices ensured the data quality through preliminary editing at their office level. The entire data entry was carried at the FBS headquarter Islamabad and the data entry programme used had a number of in built consistency checks. This is the 2<sup>nd</sup> round of district level survey and it has been observed that overall indicators do follow the usual pattern at national/provincial levels. However, in certain districts particularly for Balochistan province there are variations in indicators between 2004-05 and 2006-07 which may be due to prevailing situation in the province, which probably lead to under/over reporting of events.

## **2. EDUCATION**

### **2.1 Introduction**

There are still strong indicators that the literacy and primary school enrolment rates in Pakistan are low compared with the countries of the region, these are improving over the passage of time due to Government policies through different programmes such as SAP, PRSP etc by extending universal primary education and improving the quality of education. Education commands a large share of the overall development budget and the strategy for the sector includes, improving the functioning, utilisation of existing school, improving the quality of education, increase enrolment, improving access to education and expanding the primary education system.

This chapter will cover key indicators on school attendance, enrolment rates and literacy at district levels

### **2.2 School attendance**

The population of ten years and older that have ever attended schools is 57 percent in 2006-07 compared to 56 percent in 2005-06 (Table 2.1). This proportion is much higher in urban areas than in rural areas and much higher in men than in women. Punjab and Sindh have the highest proportions that have ever attended school. Islamabad being geographical as part of the Punjab has been included in the Punjab indicates that 87 percent of the population age ten & over has ever attended the schools followed by Rawalpindi at 80 percent and Rajanpur district at 32 percent is at the lowest. In Sindh Karachi with 78 percent is at the top and Jaccobabad with 31 percent is at the bottom. In case of N.W.F.P, Abbotabad with 69 percent and Kohistan with 29 percent are at the top and bottom respectively. In Balochistan, Quetta district with 62 percent is at the top however Kohlu with 20 percent is lowest in the Balochistan as well as in the entire country.

46 percent of the population 10 years and over in 2006-07 compared to 44 percent in 2004-05 that has completed primary or higher level education, (Table 2.2). Similarly the districts which have highest and lowest “Ever School Attendance” also follow the same pattern of completed primary level or higher education.

### **2.3 Primary Enrolment Rates (GER)**

The GER, sometimes referred to as the participation rate, is the number of children attending primary schools divided by the number of children who ought to be attending. The GERs are presented in this report in two different ways: excluding and including the katchi class and for different age groups.

Table 2.3(a) shows the gross primary level enrolment rates at National/ Provincial/ District levels excluding katchi for the age group 5-9 years and Table 2.3 (b) for age 6-10 years. The GER at National level during 2006-07 is 91 percent compared to

86 percent in 2004-05. Provinces of Punjab (from 95 percent to 100 percent), Sindh (from 75 percent to 79 percent) and Balochistan (from 67 percent to 72 percent) have shown noticeable increase in 2006-07 compared to 2004-05, (Table 2.3 b)-GER primary level has been added by changing age group from 5-9 to 6-10 for reader's information. In the Punjab, Narowal district primary GRE (Age 5-9) with 147 percent is at the top whereas district Rajanpur with 65 percent is at the bottom. In Sindh Karachi with 112 percent and Jaccobabad with 48 percent are at the top and bottom respectively. In N.W.F.P, Abbotabad district is at the top with 114 percent and Kohistan district with 60 percent is at the bottom. In Balochistan Mastung district (121 percent) and Dera Bugti district (43 percent) are at the top and bottom respectively. Dera Bhugti district has the lowest GRE in the entire country. However in Balochistan Province some of the districts like Mastung, Awaran and Qila Saifullah have reported Primary GEE on considerable higher side in 2006-07 compared to 2004-05.

The gross enrolment rate at National Level is 88 percent when katchi is also included and the age group is expanded to 4-9 year olds (Table 2.4). The pattern within districts in the provinces is more or less similar to GREs when Katchi class is excluded.

The PSLM 2006-07 collects information on enrolment in all types of school including the private and government sectors. Table 2.5 shows the gross enrolment rate in government primary schools. It is calculated as the number of children enrolled in government primary schools divided by the number of children of primary school age. One of the main strategies of the Government of Pakistan is to expand public provision of primary education and this measure can be used to assess whether government schools have increased their coverage of the population, by increasing enrolments faster than the growth in population. In the Punjab province, Narowal district with 108 percent enrolment in government schools is at the top whereas Lahore with 33 percent is at the bottom. In Sindh Nowshero Feroze 80 percent and Karachi 38 percent are at the top and lowest in the ranks. Malakand with 86 percent and Shangla with 46 percent in N.W.F.P are at the highest and lowest ranks respectively. In Balochistan Awaran 107 percent and Nasirabad 29 percent are at the top and bottom respectively.

The NER at primary level refers to the number of students enrolled in primary school of primary school age divided by the number of children in the age group for that level of education. In other words, for Pakistan, the official primary NER is the number of children aged 5 to 9 years attending primary level divided by the number of children aged 5 to 9 years.

The NER for Pakistan as a whole in 2006-07, is 56 per cent (Table 2.6 a) compared to 52 percent in 2004-05. NER for primary level has been added by changing age group from 5-9 to 6-10 for reader's information. Comparing NERs for districts within the provinces, it is revealed that in the Punjab Province Sialkot 88 percent and Bahawalpur 42 percent are at the top and bottom respectively. In case Sindh, districts of Karachi with 66 percent is at the top and Thatta with 32 percent is at the lowest. For N.W.F.P, Abbottabad 73 percent and Kohistan 28 percent are at the highest and lowest levels respectively. In Balochistan, districts of Mastung 68 percent and Qilla Abdullah 20

percent are the top and bottom respectively. Sialkot in the Punjab is the best performing district and Qilla Abdullah (Balochistan) is the worst for overall Primary NER. Generally girls have a lower enrolment rate than boys and the difference is markedly larger in rural areas than in urban areas.

Table 2.8 shows the NER for government primary schools. This is the number of children aged 5-9 years enrolled in government primary schools divided by the total number of children aged 5-9. Like the gross enrolment rate for government schools, it measures the extent to which publicly provided education is reaching its target group. However, this measure excludes overage children who are enrolled in primary school. The NER for Government primary schools within districts in the provinces follow similar pattern as observed for NERs for the entire primary enrolment.

The percentage of primary school students who are enrolled in government schools is shown in Table 2.9 (a). The government share of primary enrolment is 69 per cent in 2006-07 compared to 72 percent in 2004-05. The district wise comparison among districts within the provinces revealed that in the Punjab provinces, districts of Bhakkar 95 percent and Lahore 30 percent are at the top and bottom respectively. In Sindh, Tharparkar with 99 percent and Karachi with 34 percent govt primary enrolment are at the highest and lowest ranks respectively. In N.W.F.P districts of Upper Dir 95 percent and Peshawar 61 percent are at the top and bottom respectively. In Balochistan Dera Bugti, Awaran and Musa Khail Districts with 99 percent government enrolment are at the top whereas Quetta with 60 percent is at the bottom. The above analysis reflects that developed districts have larger share of private education whereas less developed districts mostly depend on government educational facilities.

## **2.4 Middle and Matric Enrolment Rates**

Gross and net enrolment rates for the middle level with age group 10-12 years old are presented in Tables 2.10(a) and 2.11(a). The gross enrolment rate for the middle level, for Pakistan as a whole, is 51 percent compared to 46 percent in 2004-05. The middle level enrolment in urban areas, stands at 69 percent (64 percent in 2004-05) compared to 43 percent (38 percent in 2004-05) in that of rural areas. Islamabad (Federal Capital) with 96 percent GER for middle class is at the top. However, district Rawalpindi 87 percent is next to Islamabad district in the Punjab and Muzaffargarh with 33 percent is at the bottom. In Sindh, Karachi with 71 percent and Jaccobabad with 18 percent are at the top and bottom respectively. In N.W.F.P Abbotabad & Haripur districts with 97 percent are at the top and Kohistan with 16 percent is at the lowest rank. In Balochistan Quetta (73 percent) and Dera Bhugti (8 percent) are the highest and lowest ranks respectively. Tables 2.10(b) and 2.11(b) have been added for GER & NER respectively for middle level by changing age group from 10-12 to 11-13 for reader's information.

Net enrolment rates at the middle level are much lower than gross enrolment rates (Table 2.11a). This is due to the large number of overage children that are enrolled in these classes. The district level comparison within the provinces depict that more or less

NERs have the same patterns which are observed for GREs. Islamabad with 40 percent is at top in all districts.

At matric level, gross enrolment stands at 48 per cent compared to 44 percent in 2004-05 and net enrolment rate at 10 per cent (Tables 2.12 a and 2.13a). The GRE for matric level for Islamabad (102 percent) and Rahim Yar Khan (26 percent) are at the top and bottom respectively in the Punjab province. In Sindh province Karachi with 72 percent and Thatta with 17 percent are the highest and lowest ranks respectively. The districts of Abbotabad 78 percent and Kohistan 17 percent in N.W.F.P are at the top and bottom of ranks respectively. In Balochistan Quetta 69 percent is at the top and Kohlu 5 percent is at the bottom. More or less same pattern is observed for NERs among districts within provinces. Tables 2.12(b) and 2.13(b) have been added for GER & NER respectively for matric level by changing age group from 13-14 to 14-15 for reader's information.

## **2.5 Literacy**

Literacy is an important indicator of education because its improvement is likely to have an impact, in the longer run, on other important indicators of welfare. The literacy rate for population 10 years and above is 55 percent during 2006-07, (Table 2.14 a), compared to 53 percent in 2004-05. Literacy remains much higher in urban areas than rural areas and much higher in men than women. Islamabad (Federal Capital) with 87 percent in the Punjab province is at the top whereas Rajanpur district with 31 percent is at the lowest. In Sindh, Karachi 77 percent and Tharparkar 29 percent are at the highest and lowest of ranks respectively. Abbotabad with 67 percent and Kohistan with 29 percent are ranked top and bottom districts in N.W.F.P. In Balochistan province, Quetta 62 percent and Kohlu 20 percent are at the highest and lowest of the ranks respectively. Adult literacy rate for the population aged 15 and above is 52 percent in 2006-07 compared to 50 percent in 2004-05. The pattern among districts within the provinces is similar to the Literacy Rate of population 10 years and above.

### **3. HEALTH**

#### **3.1 Introduction**

The Government health strategy focuses on young children and their mothers, particularly in rural areas. One of the most pressing needs addressed by Government is to improve women's access to government health care. The Government's strategy for primary health includes:

- improving the efficiency and utilisation of basic health care services, both preventive and curative;
- improving programme design by paying more attention to quality;
- increasing access to health care by constructing more facilities;
- increasing women's access by recruiting more female staff;

In this chapter, information is presented on a number of key indicators which include percentage of population who get sick or injured, type of health consultation, immunization, diarrhea and pre-and post-natal care.

#### **3.2 Sick or injured**

. During the reference period of two weeks prior to the date of interview 6.27 percent of the population in 2006-07 compared to 7.10 percent in 2004-05 reported sick or injured. Sindh and NWFP with 6.67 percent and 6.76 percent respectively have comparatively higher prevalence of sick or injured population compared to Punjab and Balochistan. Prevalence of sickness / injuries is lower in most of the districts in the Punjab compared to other provinces, Lakki Marwat district with 12.45 percent prevalence is at the top (Table 3.2). About 94.44 percent of reported as sick or injured had some type of health consultation. Over 68.72 percent ( 67 percent in 2004-05) of sick or injured persons consulted private hospitals or doctors compared to 20.64 percent (22.8 percent in 2004-05) who visited public hospitals/ dispensaries/ RHCs /BHUs for their treatment (Table 3.3). The pattern of health consultation in districts for public and private hospitals / dispensaries is the same which has been observed at National/ Provincial level.

#### **3.3 Immunization**

One of the primary objective of the Government in health sector is to expand the coverage of immunization. Measuring immunization coverage in household surveys is not easy. Parents often do not have the children's immunization / health cards with full information on vaccinations received. Immunization rates based only on the information given on immunization cards ('record') may therefore, underestimate coverage.

However, it has the benefit of using written information recorded by health workers.<sup>1</sup> The alternative is to ask parents about their child's vaccination history, and calculate coverage rates using this information ('recall'). This runs the risk that parents will not remember vaccinations will confuse different types of vaccines or will confuse other injections with vaccinations. Neither measure is ideal; both are presented in this report to help make an informed judgment on trends. In this report, both of these measures use all children of the appropriate age range in the denominator.

According to the WHO guidelines, a child should receive a BCG vaccination to protect against tuberculosis, three doses of DPT to protect against diphtheria, pertussis, and tetanus, three doses of polio vaccine, and a measles vaccination. Table 3.4 presents immunisation rates for children aged 12-23 months, who have been immunised during the period 12 to 24 months prior to the survey. Overall, when recall and record measures are included, full immunisation rates (all the 8 recommended vaccines) showed a Positive increase from 71 per cent in 2005-06 to 76 per cent in 2006-07.<sup>2</sup> For fully immunized based on recall and record Gujrat with 100 percent, Karachi 82 percent , Charsada 97 percent, and Mastung at almost 100 percent are top ranked districts in the Punjab, Sindh, N.W.F.P, and Balochistan provinces respectively.

Using the measure that includes recall & record, there is an increase in full immunization rates for both urban and rural areas, but in rural areas it is particularly impressive going from 66 per cent in 2005-06 to 73 per cent in PSLM 2006-07. When considering the record based measure immunization rates improved in urban areas as well as rural areas. Considerable improvement is shown in rural NWFP and Balochistan from 61 percent and 41 percent in 2005-06 to 74 percent and 49 percent in 2006-07 respectively.

Coverage by antigen is given in Tables 3.5 and 3.6. The former is based on record, the latter on record plus recall. Both measures have shown general improvement in the coverage of all antigens as compared with 2005-06.

### **3.4 Diarrhoea**

Dehydration caused by diarrhoea is a major cause of mortality among children. Childhood diarrhoea has been a serious health problem in Pakistan. Both its prevention, through improved water and sanitation, and the treatment of dehydration through oral rehydration salts (ORS) are goals of government. Home management of diarrhoea through oral rehydration salts (ORS) or a recommended home fluid (RHF) - can prevent many of these deaths. Preventing dehydration by increasing fluid intake is important strategy for managing diarrhoea.

---

<sup>1</sup> Note that even the record-based measure cannot be based exclusively on vaccinations recorded on the health card, since it is not possible to identify the source of the information on each antigen. Instead, it is calculated for all children who had a health card, using all immunizations reported, whether or not these were recorded on the card. It is likely that most will have been recorded on the card.

<sup>2</sup> Full immunization means that the child has received: BCG, DPT1, DPT2, DPT3, Polio1, Polio2, Polio3 and measles.

It was asked to report whether a child had diarrhoea in the 30 days prior to the survey. If so, a series of questions were asked whether they have consulted someone for it or not and about whether ORS has been given to child or not.

Overall the percentage of children who have suffered from diarrhoea in the 30 days decreased from 12 per cent in 2005-06 to 11 per cent in 2006-07. By province Sindh and Balochistan have shown increase in diarrhoea cases while Punjab and NWFP have shown decrease. T.T Singh 22 percent in the Punjab province, Mir Pur Khas 19 percent in Sindh, D.I Khan 20 percent in NWFP and Awaran 31 percent in Balochistan province are the most affected districts within each province. (Table 3.7).

In 94 per cent of diarrhoea cases a practitioner of some kind was consulted. This represents an improvement as compared with 86 per cent in 2005-06. The pattern of practitioner consultation in all districts of Punjab (except Bhakhar 77 percent and Rahim Yar Khan 74 percent) Sindh (except Tharparker 76 percent) and N.W.F.P (except Kohistan 15 percent) is the same. However, in Balochistan province pattern is mix with the exception of Kharan district having 22 percent consultation rate (Table 3.8). The use of ORS in diarrhoea cases has increased to 76 percent in 2006-07 ORS is most likely to be used in Sindh, NWFP and Balochistan, whereas its use is lowest in the Punjab. ORS is more or less equally used in NWFP urban and rural areas, except in rural Balochistan. The pattern within the districts is more or less the same, which has been observed at provincial levels.

In cases of diarrhoea, the most likely type of practitioner to be consulted continues to be a private practitioner 72 percent in 2006-07 (Table 3.9) as observed in 2005-06. Government facilities shows decline as compared to 2005-06 (19 to 13 per cent). Basic health units (BHU) and rural health centres (RHC) consulted only 6 per cent of cases in rural Pakistan, which gives some indication of the very limited use of the government primary health network for these kind of curative services. However, in Balochistan 56 percent diarrhea cases were consulted by government facilities and in most of the districts, government facilities such as hospitals, Dispenseries and BHUs were consulted.

### **3.5 Pre-and post-natal care**

Quality prenatal care can contribute to the prevention of maternal mortality by detecting and managing potential complications and risk factors, including pre-eclampsia, anaemia, and sexually transmitted diseases. Pre-natal care also provides opportunities for women to learn the danger signs of pregnancy and delivery, to be immunised against tetanus, to learn about infant care, and be treated for existing conditions, such as malaria and anaemia.

Some 53 per cent of mothers compared to 52 percent in 2005-06 who had given birth in the last three years went for pre-natal consultations during their last pregnancy (Table 3.10). The attendance rate was much higher in urban (73 per cent) than rural areas (45 per cent). Attendance rates have increased in urban as well as rural areas. In rural

areas, Punjab has the highest attendance and Balochistan the lowest. Rawalpindi 79 percent, Karachi 90 percent, Nowshera 87 percent and Kharan and Quetta 61 percent are at the top ranks within the provinces. In rural Pakistan, the three most commonly consulted sources were private hospital/clinic (40 per cent), government hospital/clinic (25 per cent) and Home TBA (15 per cent).

Tetanus toxoid injections are given to women during pregnancy to protect infants from neonatal tetanus, a major cause of infant death that is due to primarily unsanitary conditions during childbirth. In addition these injections protect women from developing tetanus themselves or suffering from sepsis. Two doses of tetanus toxoid during pregnancy offer full protection. However, if a woman was vaccinated during a previous pregnancy, she may only need a booster to give full protection. Five doses are thought to provide lifetime protection. Some 56 per cent of mothers compared to 51 percent in 2004-05 had received a tetanus toxoid injection during their last pregnancy. Gujrat (86 percent) in the Punjab, Karachi (79 percent) in Sindh, Nowshera (85 percent) in N.W.F.P and Mastung (77 percent) in Balochistan are at top ranks within the provinces. (Table 3.11).

The vast majority of births, some 68 per cent, take place at home compared to 71 percent in 2004-05 (Table 3.12). In rural areas, some 78 per cent were at home compared with 44 per cent in urban areas. The most commonly cited source of assistance in rural areas was a trained dai, & traditional birth attendant (60 per cent of cases), followed by family member/relative (18 per cent). Bhakhar (98 percent) in the Punjab, Tharparker (96 percent) in Sindh, D.I Khan (91 percent) in N.W.F.P and Kohlu (100 percent) in Balochistan are the highest ranked districts, where child was delivered at home.

Post-natal consultation rates even though improved in 2006-07 were much lower than the pre-natal rates cited above (Table 3.13). 24 per cent of mothers received a post-natal check up within six weeks of delivery during their last pregnancy in 2006-07 compared to 23 percent in 2004-05. Urban areas had higher rates than rural areas, though both were low. Islamabad (71 percent) is the top district for post natal consultations.

The three most commonly cited sources of post-natal care in rural areas were private hospital/clinic (41 per cent), government hospital/clinic (23 per cent), and traditional birth attendant at home (18 per cent).

## **4. Housing, Water supply & Sanitation**

### **4.1 Introduction**

Most of the households in rural Pakistan do not have access to adequate potable water. Many also lack toilets and adequate sanitation systems. The Government aims to expand access to clean drinking water and to improve sanitation particularly in rural areas. The main Government strategy in rural water supply is to improve the performance and operation of local water supply systems by promoting community responsibility for the management and maintenance of systems. To improve sanitation in rural areas, the government is promoting the construction of household latrines, the construction of open surface drains with street pavements and providing hygiene education.

In this chapter, information is presented on housing, electricity, gas, water supplies and toilets.

### **4.2 Housing:**

86 per cent of all households in 2006-07 compared to 87 percent in 2004-05 reported that they have own dwelling unit while 7 percent of households have rented dwelling unit and about 6 percent have rented free house but a small number of 1 percent households have on subsidized housing units. (Table 4.1). In Islamabad (Federal Capital) 43 percent (37 percent in 2004-05) households live in rented or subsidized rented units compared to 52 percent (59 percent in 2004-05) live in their own housing units. In all other districts in the country people predominantly live in their own housing units.

Table 4.2 shows percent distribution of household material used for “Roof”. In Pakistan about 44 percent (50 % in 2004-05) housing units are constructed using Wood/ Bamboo (18 percent Urban and 57 percent Rural). Province- wise distribution is 40 percent (44 percent in 2004-05) in Punjab, 39 percent (41 percent in 2004-05) in Sindh, 59 percent (60 percent in 2004-05) in N.W.F.P and 78 percent (79 percent in 2004-05) in Balochistan. In Balochistan Province with the exception of Quetta district all the remaining districts use predominantly Wood/ Bamboo.

Similarly in Table 4.3 percent distribution is given of material used for the construction of “Walls”. Burnt Bricks/ Blocks have been used in 69 percent (64 percent in 2004-05) housing units (94 percent Urban and 56 percent Rural). Here again in Balochistan province 20 percent (19 percent in 2004-05) units have reported the use of Burnt Bricks/ Blocks which is considerably low compared to other provinces. Except Quetta and to some extent Gwadar all remaining districts use Mud Bricks/ Mud and particularly in the rural areas this percentage is over 70.

### 4.3 Electricity & Gas:

Table 4.5 shows that 87 percent (84 percent in 2004-05) of households were using electricity as fuel for lighting and 12 percent (15 percent in 2004-05) of households use gas and oil as a fuel for lighting. 98 percent (94 percent in 2004-05) urban households have electricity compared to 81 percent (74 percent in 2004-05) in rural areas. Punjab with 90 percent (89 percent in 2004-05), Sindh 79 percent (80 percent in 2004-05), N.W.F.P 91 percent (90 percent in 2004-05) and Balochistan 65 percent (62 percent in 2004-05) households, are having electricity connections. Gujrat (99.50 percent), Karachi (95.62 percent), Nowshera (99.94 percent) and Quetta (97.84 percent) are the top ranked districts within the provinces having electricity connections in households.

Table 4.6 indicates that 30 percent households compared to 29 percent are using gas as fuel. Only 7 percent households in rural households are using gas compared to 74 percent in urban areas. Quetta followed by Karachi are the two top districts in the country with 92.26 percent and 92.04 percent gas connections respectively.

### 4.4 Sources of Drinking Water

The tap water facility has increased from 34 percent in 2004-05 to 36 percent in 2006-07. Overall Lahore 80 percent in the Punjab, Karachi 88 percent in Sindh, Haripur 68 percent in N.W.F.P and Quetta 87 percent in the Balochistan are the top districts within provinces having tap water facility. The main source of drinking water in rural areas in Pakistan is the hand pump (Table 4.7). Hand pumps and motor pumps together contributed 56 per cent of households with drinking water in 2005-06 which decreased to 52 percent in 2006-07. In rural areas hand pumps and motor pumps usage has declined to 62 percent in 2006-07 compared to 65 percent in 2005-06. Moreover, the percentage of households is depending on lower water sources i.e. dug well and others either remained unchanged or slightly increased.

NWFP has the best rural water supply amongst the provinces in terms of tap water but at second last place as for its 41 percent population depend on a dug well or other poor sources (river, canal or stream). The vast majority of the rural population of Punjab has either hand pump or water from a motor pump<sup>1</sup> and only 5 per cent of the rural population depend on a dug well or other sources (river, canal or stream). Sindh-Rural has shown increase in poor water supply sources in 2006-07 compared to 2005-06 i.e. from 18 percent to 21 percent. The rural water supply situation in NWFP is still worse, and is worst of all in Balochistan. In these two provinces, 41 and 67 per cent of the rural population, respectively, depend on water from a dug well or from a river/canal/stream. The wide variation in water sources between provinces suggests strong cases for interventions targeted, especially, at NWFP and Balochistan.

---

<sup>1</sup> It is assumed that water from a hand pump is, generally, cleaner than from a dug well or river/canal/stream. However, it is important to note that water from a hand pump may sometimes be contaminated. Since no tests are carried out on water quality, the PSLM must depend on the type of water source used to provide an approximate indicator of quality.

## 4.5 Toilets

In Pakistan as a whole, 27 per cent households compared to 30 percent in 2005-06 do not have any toilet (Table 4.8). This varies greatly between urban and rural areas i.e. 4 per cent of urban households have no toilet compared to 39 per cent of rural households. Rural areas have much poorer sanitation provision than they do drinking water provision. However, there seems to have been significant improvement in rural sanitation, with an improvement in the proportion of households without a toilet from 30 percent in 2006-07 to 27 percent in 2005-06. Rural Punjab has the highest proportion of households reporting no toilet at all, i.e. 44 per cent. Rural Sindh has the lowest, at 27 per cent.

The use of flush toilets is 92 percent for the urban households, Punjab with 93 percent is highest and Balochistan with 78 percent is the lowest. The top ranked districts within the province having Flush toilet facility are Lahore 93 percent, Karachi 94 percent, Abbottabad 77 percent, and Quetta 82 percent. In the Punjab (rural) with the exception of Lahore (9 percent) all other districts having significant portion of rural population is still without any toilet facility. Similarly, in other provinces situation is not as worse as of Punjab but still majority of districts do not have toilet facility for rural population.

## **5. Household Perception of Economic Situation and Satisfaction by Facilities and Service Use.**

### **5.1 Introduction**

This type of information has been collected for the first time in FBS household surveys. Since government is spending lot to improve the economic situation of people and also investing considerable amount in providing different types of facilities/ services. Considering as how facilities/ services are being passed on to the general public, the respondents were asked to give their perception in their economic as well as community improvement and how effectively services/ facilities are available to them.

### **5.2 Perception of Economic Situation**

Households were asked to compare their economic situation with last year. In response to this question 51.52 percent in 2006-07 reported no change (51.51 percent in 2004-05), 21.35 percent reported worse or much worse (23.92 percent in 2004-05) and 26.99 percent reported better or much better (24.15 percent in 2004-05). However, when asked to compare the economic situation of the community where they live, 59.24 percent in 2006-07 reported the same (59.08 percent in 2004-05), 10.27 percent reported worse or much worse (9.56 percent in 2004-05) and 25.93 percent reported better or much better (25.17 percent in 2004-05).

### **5.3 Satisfaction by Facilities and Service Use**

Households were also asked to give opinion about their satisfaction of the Facilities / Services provided by the government. In response to this question, 35.31 percent in 2006-07 reported satisfaction on Govt Basic Health Facilities (35.94 percent in 2004-05), 12.07 percent satisfied with the Family Planning Services (10.47 percent in 2004-05), 61.23 percent with Schools (59.84 percent in 2004-05), 13.97 percent with Veterinary Services pre-dominantly rural (11.82 percent in 2004-05), 14.13 percent with Agriculture Extension all rural (10.94 percent in 2004-05) and 6.6 percent with police (6.5 percent in 2004-05).

## **APPENDIX A: Sample Design For Pakistan Social And Living Standards Measurement Survey District Level, 2006-07**

### **Objectives:**

The data generated through PSLM Survey will be used to assist the government in formulating the poverty reduction strategy as well as development plans at district level. The indicators will be developed at district level in the following sectors.

1. Education
2. Health
3. Water Supply & Sanitation.
4. Household Assets/Amenities.
5. Satisfaction to Service Delivery.

### **Universe:**

The universe of this survey consists of all urban and rural areas of all four provinces, from the scope of the survey.

### **SAMPLING FRAME**

#### **Urban area:**

FBS has developed its own urban area frame. All urban areas comprising cities/towns have been divided into small compact areas known as enumeration blocks (E.Bs) identifiable through map. Each enumeration block comprises about 200-250 households and categorized into low, middle and high-income group, keeping in view the socio economic status of the majority of households. Urban area sampling frame consists of 26698 enumeration blocks has been updated in 2003.

#### **Rural area:**

With regard to the rural areas, the lists of villages/mouzas/dehs according to Population Census, 1998 have been used as sampling frame. In this frame, each village/mouza/deh is identifiable by its Name, Had Bast Number, Cadastral map etc. This frame is comprised 50590 villages/mouzas

The number of enumeration blocks in urban and mouzas/dehs/villages in rural areas of the country are as under:

#### **NO. OF ENUMERATION BLOCKS AND VILLAGES AS PER SAMPLING FRAME**

| Province      | Number of E. Blocks | Number of Villages |
|---------------|---------------------|--------------------|
| Punjab        | 14,549              | 25,875             |
| Sindh         | 9,025               | 5,871              |
| NWFP          | 1,913               | 7,337              |
| Balochistan   | 613                 | 6,557              |
| A.J.K         | 210                 | 1,654              |
| Northern Area | 64                  | 566                |
| FATA          |                     | 2,596              |
| Islamabad     | 324                 | 132                |
| <b>Total</b>  | <b>26,698</b>       | <b>50,588</b>      |

## STRATIFICATION PLAN

### Urban Areas:

Within each district large sized cities having population five lacs and above have been treated as independent stratum. Each of these cities has further been sub-stratified into low, middle and high group's areas. The remaining cities/towns within each district have been grouped together to constitute an independent stratum.

### Rural Areas:

The entire rural domain of a district for Punjab, Sindh, NWFP and Balochistan provinces has been considered as independent stratum.

### Sample Size and its Allocation:

To determine optimum sample size for this survey, analytical studies based on the results of Pakistan Demographic Survey, Labour Force and Pakistan Integrated Households Sample Survey were undertaken. Keeping in view the variability exist within the population for the characteristics for which estimates are to be prepared, population distribution, level of estimates and field resources available a sample size of 76520 households enumerated from 5348 sample PSUs (2262 from urban and 3086 from rural areas) has been considered sufficient to produce reliable estimates at district level in respect of all provinces. An Annexure-I showing sample sizes by districts in four provinces of Pakistan, is attached.

**Sample Design:** A two-stage stratified sample design has been adopted for this survey.

### Selection of primary sampling Units (PSUs):

Enumeration blocks in the urban domain and mouzas/dehs/villages in rural domain have been taken as primary sampling units (PSUs). In urban domain sample PSUs from each stratum have been selected by probability proportional to size (PPS) method of sampling scheme using households in each block as measure of size (MOS).

Similarly in rural areas, population of each village has taken as MOS for selection of sample villages using probability proportional to size method of selection.

**Selection of Secondary Sampling Units (SSUs):**

Households within each sample Primary Sampling Unit (PSU) have been considered as Secondary Sampling Units (SSUs). 16 and 12 households have been selected from each sample village and enumeration block respectively by systematic sampling scheme with a random start.

**Estimation Procedures:**

Detail of estimation procedures for estimates and their variances is attached as Annexure – II.

**District-Wise Distribution of Sample Areas \_Villages and Enumeration Blocks) and Household –  
PSLM 2006-07**

| S.No | Districts       | Sample Areas       |                    |                    | Sample Households   |                     |                     |
|------|-----------------|--------------------|--------------------|--------------------|---------------------|---------------------|---------------------|
|      |                 | Urban              | Rural              | Total              | Urban               | Rural               | Total               |
|      | <b>PUNJAB</b>   | <b><u>1086</u></b> | <b><u>1182</u></b> | <b><u>2268</u></b> | <b><u>12842</u></b> | <b><u>18840</u></b> | <b><u>31682</u></b> |
| 101. | Attock          | 15                 | 27                 | 42                 | 175                 | 426                 | 601                 |

## Estimation Procedure:

### ESTIMATION PROCEDURE ADOPTED FOR PSLM SURVEY

#### NOTATIONS:

$N_h$  = Total number of Primary Sampling Units (PSUs) in the  $h$ th stratum of a province.

$n_h$  = Total number of sample PSUs in the  $h$ th stratum of a province.

$M_{hi}$  = Total number of Secondary Sampling Units (SSUs) in the  $i$ th sample PSU of  $h$ th stratum of a province.

$m_{hi}$  = Number of sample SSUs in the  $i$ th sample PSU of  $h$ th stratum of a province.

$P_{hi}$  = Assigned probability of selection of  $i$ th PSU of the  $h$ th stratum of a province.

$y_{hij}$  = Value of any characteristic  $y$  of  $j$ th SSU within  $i$ th PSU of  $h$ th stratum of a province.

$x_{hij}$  = Value of any characteristic  $x$  of  $j$ th SSU within  $i$ th PSU of  $h$ th stratum of a province with whose respect proportion is required.

#### (i): ESTIMATION FORMULAE FOR TOTALS AND THEIR VARIANCES

$$N = \sum_{h=1}^L N_h$$

$$n = \sum_{h=1}^L n_h$$

$$\bar{Y}_h = \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{\bar{Y}_{hi}}{p_{hi}}$$

OR

$$\bar{Y}_h = \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{1}{p_{hi}} \frac{M_{hi}}{m_{hi}} \sum_{j=1}^{m_{hi}} y_{hij}$$

$$\bar{Y} = \sum_{h=1}^L \bar{Y}_h = \sum_{h=1}^L \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{\bar{Y}_{hi}}{p_{hi}}$$

For  $X$ , another variable of interest, we have

$$\bar{X}_h = \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{\bar{X}_{hi}}{P_{hi}} = \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{1}{P_{hi}} \frac{M_{hi}}{m_{hi}} \sum_{j=1}^{m_{hi}} X_{hij}$$

$$\bar{X} = \sum_{h=1}^L \bar{X}_h = \sum_{h=1}^L \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{\bar{X}_{hi}}{p_{hi}}$$

$$\bar{R} = \frac{\bar{Y}}{\bar{X}}$$

$$v(\bar{Y}_h) = \frac{1}{n_h} s_{ht}^2 = \frac{1}{n_h(n_h - 1)} \left( \sum_{i=1}^{n_h} \frac{\bar{Y}_{hi}^2}{P_{hi}^2} - \frac{(\sum_{i=1}^{n_h} \frac{\bar{Y}_{hi}}{P_{hi}})^2}{n_h} \right)$$

$$v(\bar{Y}) = \sum_{h=1}^L \frac{1}{n_h} s_{ht}^2 = \sum_{h=1}^L \frac{1}{n_h(n_h - 1)} \left( \sum_{i=1}^{n_h} \frac{\bar{Y}_{hi}^2}{P_{hi}^2} - \frac{(\sum_{i=1}^{n_h} \frac{\bar{Y}_{hi}}{P_{hi}})^2}{n_h} \right)$$

**(ii): FORMULA FOR RATIO ESTIMATES**

$$r = \frac{\bar{Y}}{\bar{X}}$$

where  $\bar{Y}^\wedge$  and  $\bar{X}^\wedge$  can be estimated by equations under item (i) given above.

$$Rel V(r) = \frac{1}{\bar{X}^2} \sum_{h=1}^L \frac{1}{n_h} s_{hb}^2 + \frac{1}{\bar{X}^2} \sum_{h=1}^L \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{M_{hi}^2}{p_{hi}^2 m_{hi}} \frac{(M_{hi} - m_{hi})}{M_{hi}} s_{hw}^2$$

where

$$s_{hb}^2 = s_{ht}^2 - s_{hw}^2$$

$$s_{ht}^2 = s_{hy}^2 + r^2 s_{hx}^2 - 2r s_{hxy}$$

$$s_{hx}^2 = \frac{1}{(n_h - 1)} \left[ \sum_{i=1}^{n_h} \frac{\hat{X}_{hi}^2}{p_{hi}^2} - \frac{\left( \sum_{i=1}^{n_h} \frac{\hat{X}_{hi}}{p_{hi}} \right)^2}{n_h} \right]$$

$$s^2_{hy} = \frac{1}{(n_h - 1)} \left[ \sum_{i=1}^{n_h} \frac{\bar{y}_{hi}^2}{p_{hi}^2} - \frac{\left( \sum_{i=1}^{n_h} \frac{\bar{y}_{hi}}{p_{hi}} \right)^2}{n_h} \right]$$

$$s_{hxy} = \frac{1}{n_h - 1} \left[ \sum_{i=1}^{n_h} \left( \frac{\bar{x}_{hi}}{p_{hi}} \frac{\bar{y}_{hi}}{p_{hi}} \right) - \frac{\left( \sum_{i=1}^{n_h} \frac{\bar{x}_{hi}}{p_{hi}} \right) \left( \sum_{i=1}^{n_h} \frac{\bar{y}_{hi}}{p_{hi}} \right)}{n_h} \right]$$

$$s^2_{hw} = \frac{1}{n_h - 1} \sum_{i=1}^{n_h} \frac{1}{p_{hi}^2} \frac{M_{hi}^2}{m_{hi}} \frac{(M_{hi} - m_{hi})}{M_{hi}} s^2_{hi}$$

and

$$s^2_{hi} = s^2_{hiy} + r^2 s^2_{hix} - 2r s_{hixy}$$

$$s^2_{hiy} = \frac{1}{(m_{hi} - 1)} \left[ \sum_{j=1}^{m_{hi}} y_{hij}^2 - \frac{\left( \sum_{j=1}^{m_{hi}} y_{hij} \right)^2}{m_{hi}} \right]$$

$$s^2_{hix} = \frac{1}{(m_{hi} - 1)} \left[ \sum_{j=1}^{m_{hi}} x_{hij}^2 - \frac{\left( \sum_{j=1}^{m_{hi}} x_{hij} \right)^2}{m_{hi}} \right]$$

$$s^2_{hixy} = \frac{1}{(m_{hi} - 1)} \left[ \sum_{j=1}^{m_{hi}} x_{hij} y_{hij} - \frac{\left( \sum_{j=1}^{m_{hi}} x_{hij} \sum_{j=1}^{m_{hi}} y_{hij} \right)}{m_{hi}} \right]$$

## APPENDIX B: CONFIDENCE INTERVALS

## **List of Officers Involved In PSLM Survey 2006-07**

The PSLM report is produced by the efforts of the following officers of Federal Bureau of Statistics listed under the specific tasks:

### **PLANNING, EXECUTION AND FINALIZATION OF REPORT:-**

- Mr. Khalid Mahmud  
Deputy Director General (Project Director)
- Mr. Ayazuddin  
Director
- Ms. Rabia Awan  
Chief Statistical Officer

### **DATA PROCESSING:-**

- Mr. Muhammad Afzal Arian  
Deputy Director General
- Mr. Ijaz Hussain  
Director
- Mr. Mumtaz Uddin Shaikh  
Chief System Analyst
- Mr. Hafeez Ahmad  
Chief System Analyst
- Mr. Muhammad Javaid Rana  
Chief System Analyst

### **SAMPLE DESIGN:-**

- Mr. Muhammad Ramzan Khan  
Chief Statistical Officer

### **FIELD OPERATIONS:-**

- Mr. Abdul Hakeem Makhdoom  
Deputy Director General
- Mr. Shaukatullah Khan  
Director

TABLE 2.1 POPULATION THAT HAS EVER ATTENDED SCHOOL BY- PROVINCE AND DISTRICTS.

**NOTES:**

1. Population aged 10 years and older that has ever attended school expressed as a percentage of the total population aged 10 years and older.
2. Attended school: all those individuals who have ever attended school (either currently attending, or attended in the past) were taken to have attended school.

**NOTES:**

1.Gross enrolment rate: [Number of children attending primary level (classes 0-5) divided by number of children aged 4 - 9 years] multiplied by 100. Enrolment in katchi is included.

2.Numerator of GER: Raised sum of all individuals who report currently attending primary level.

3Denominator of GER: Raised sum of all individuals aged 4- 9 years who respond to the relevant questions.

**NOTES:**

1. Net enrolment rate: [Number of children aged 4 - 9 years attending primary level (classes 0 – 5) divided by number of children aged 4 - 9 years] multiplied by 100. Enrolment in katchi is included.
2. Numerator of NER: Raised sum of all individuals aged 4 - 9 years who report currently attending primary level, including katchi class.
3. Denominator of NER: Raised sum of all individuals aged 4 - 9 years who responded to the relevant questions.

**NOTES:**

- 1.Gross enrolment rate: [Number of children attending middle level (classes 6 - 8) divided by number of children aged 10 - 12 years] multiplied by 100.
- 2.Numerator of GER: Raised sum of all individuals who report currently attending middle level (class 6 - 8).
- 3.Denominator of GER: Raised sum of all individuals aged 10 - 12 years who respond to the relevant questions.

**NOTES:**

- 1.Gross enrolment rate: [Number of children attending middle level (classes 6 - 8) divided by number of children aged 11 - 13 years] multiplied by 100
- 2.Numerator of GER: Raised sum of all individuals who report currently attending middle level (class 6 - 8).
- 3.Denominator of GER: Raised sum of all individuals aged 11 - 13 years who respond to the relevant questions.

**NOTES:**

- 1.Net enrolment rate: [Number of children aged 11 - 13 years attending middle level (classes 6 - 8) divided by number of children aged 11 - 13 years] multiplied by 100. Note that this age range is different from the one used in previous PIHS reports.
- 2.Numerator of NER: Raised sum of all individuals aged 11 - 13 years who report currently attending middle level.
- 3.Denominator of NER: Raised sum of all individuals aged 11 - 13 years who respond to the relevant questions.

**NOTES:**

- 1.Gross enrolment rate: [Number of children attending matric level (classes 9 - 10) divided by number of children aged 13 - 14 years] multiplied by 100.
- 2.Numerator of GER: Raised sum of all individuals who report currently attending Matric level.
- 3.Denominator of GER: Raised sum of all individuals aged 13 - 14 years who respond to the relevant questions.

**NOTES:**

- 1.Gross enrolment rate: [Number of children attending matric level (classes 9 - 10) divided by number of children aged 14 -15 years] multiplied by 100.
- 2.Numerator of GER: Raised sum of all individuals who report currently attending Matric level.
- 3.Denominator of GER: Raised sum of all individuals aged 14 -15 years who respond to the relevant questions.

## NOTES:

- 1.Net enrolment rate: [Number of children aged 13 - 14 years attending matric level (classes 9 - 10) divided by number of children aged 13 - 14 years] multiplied by 100.
- 2.Numerator of NER: Raised sum of all individuals aged 13 - 14 years who report currently attending matric level.
- 3.Denominator of NER: Raised sum of all individuals aged 13 - 14 years who respond to the relevant questions.

**NOTES:**

- 1.Net enrolment rate: [Number of children aged 14 - 15 years attending matric level (classes 9 - 10) divided by number of children aged 14 - 15 years] multiplied by 100.
- 2.Numerator of NER: Raised sum of all individuals aged 14 - 15 years who report currently attending matric level.
- 3.Denominator of NER: Raised sum of all individuals aged 14 - 15 years who respond to the relevant questions.

## NOTES:

1. Note that even the record-based measure cannot be based exclusively on vaccinations recorded on the health card, since it is not possible to identify the source of the information on each antigen. Instead, it is calculated for all children who had a health card, using all immunizations reported, whether or not these were recorded on the card. It is likely that most will have been recorded on the card.

2. Full immunization means that the child has received: BCG, DPT1, DPT2, DPT3, Polio1, Polio2, Polio3 and measles.

## NOTES:

- Note that even the record-based measure cannot be based exclusively on vaccinations recorded on the health card, since it is not possible to identify the source of the information on each antigen. Instead, it is calculated for all children who had a health card, using all immunizations reported, whether or not these were recorded on the card. It is likely that most will have been recorded on the card.
- Full immunization means that the child has received: BCG, DPT1, DPT2, DPT3, Polio1, Polio2, Polio3 and measles.
- Based on record: Children who reported having received full immunisation who also have an immunisation card, expressed as a percentage of all children aged 12-23 month.

TABLE 3.4: PERCENTAGE OF CHILDREN AGED 12-23 MONTHS THAT HAVE BEEN IMMUNISED

## C: BASED ON RECALL AND RECORD - FULLY IMMUNISED

**NOTES:**

1. Children who suffered from diarrhoea in the 30 days prior to the interview expressed as a percentage of all children aged less than 5 years.
- 2.Diarrhoea in past 30 days: All three surveys contained a question addressed to the mothers of all children aged less than 5 years where they were asked if they had suffered from an episode of diarrhoea in the past 30 days.
- 3.Estimates of PIHS 98-99 & 2001-02 have been recalculated for children less than 5 years to make it comparable with the PSLMS 2004-05.

**NOTES:**

- 1.Diarrhoea cases where a practitioner was consulted expressed as a percentage of all diarrhoea cases during past 30 in children under 5 years.
- 2.Cases where a practitioner was consulted: For all the children that reported an episode of diarrhoea in the past 30 days the mothers were asked if they consulted a practitioner for the ailment. The statistics reported here represent the percentage of cases where a practitioner was consulted.
- 3.Estimates of PIHS 98-99 & 2001-02 have been recalculated for children less than 5 years to make it comparable with PSLMS 2004-05.

TABLE 3.8- TREATMENT OF DIARRHOEA IN CHILDREN UNDER 5 YEARS

## NOTES:

1. Diarrhoea cases where ORS was administered to the child expressed as a percentage of all diarrhoea cases during the past 30 days in children under 5 years.
2. Cases where ORS was administered: For all children that reported an episode of diarrhoea in the past 30 days, the mothers were asked if ORS had been given to the child. The statistics reported here represent the percentage of cases where ORS was given to the child.
3. Estimates of PIHS 98-99 & 2001-02 have been recalculated for children less than 5 years to make it comparable with PSLMS 2004-05.

NOTES:

1. Household obtaining water from the source indicated expressed as a percentage of the total number of households.
2. Categories: "Tap water" consists of both tap water inside & out side house; "Hand pump" includes hand-pumps both inside and outside. Motor pump includes motor pump and tube well; "Dug well" includes well open and well closed both inside & out side the house; and "Other" includes public standpipe (supplied by tanker), water seller, canal, river, spring, stream, pond and other.
3. Totals may not add to 100 because of rounding.

TABLE 4.7: PERCENTAGE DISTRIBUTION OF HOUSEHOLD BY SOURCE OF DRINKING WATER BY PROVINCE & DISTRICT.

NOTES:

1. Households having the type of toilet indicated expressed as a percentage of the total number of household.
2. Categories: "Flush" consists of flush connected to public sewerage, flush connected to septic tank and flush to open drain while "Non-Flush" contains dry raised latrine, dry pit latrine and other.
3. Totals may not add to 100 because of rounding.
